iDbase Software

1. Booking Process Steps

1.1 Landing Page Interaction

- The landing page allows users to:
  - Enter details such as:
    - Main Pickup Location
    - Drop Location
    - Date and Time
    - Number of Seats
  - Choose whether to share ride costs with other passengers:
    - Yes: Enables cost-sharing functionality.
    - No: The ride is booked as a private trip.
  - View ride costs dynamically, including:
    - Total Cost
    - Per Passenger Cost (if shared).
- Users can proceed with the booking by clicking "Proceed with Booking."

1.2 User Registration and Login

- The system verifies if the user is:
  - New:
    - Asks for a phone number or email.
    - Sends a verification code for authentication.
    - Prompts the user to fill in details such as Name, Surname, and Payment Information if not already registered.
  - Returning:
    - Automatically logs in based on the entered phone number or email.

1.3 Shared Ride Selection

- If the user selects "Yes" for sharing the cost:
  - The system prompts for additional passengers' phone numbers.
  - Sends invites via a URL to launch the app and use the service.
- If the user selects "No":
  - The cost is held from the main booker’s payment method.

1.4 Dynamic Pickup Location Adjustment

- If passengers added via sharing opt for different pickup locations:
  - The system recalculates the cost based on the new pickup point and updates:
    - Initial Shared Cost
    - Adjusted New Cost

1.5 Payment Authorization

- Pre-authorization holds the payment amount to confirm booking details.
- Users finalize the booking once all steps are completed.

2. Epics

2.1 User Registration and Authentication

- Enable new and returning users to register and log in seamlessly.
- Authenticate users via phone or email verification.

2.2 Ride Booking and Cost Calculation

- Allow users to book rides with pickup and drop-off locations.
- Calculate total and per-passenger costs dynamically.

2.3 Shared Ride Coordination

- Facilitate ridesharing by inviting other passengers.
- Recalculate costs based on shared rides and additional pickups.

2.4 Payment Authorization and Management

- Implement pre-authorization of payments.
- Ensure secure and transparent payment handling.

2.5 Dynamic Pickup Management

- Allow users to adjust pickup locations for shared rides.
- Recalculate costs based on location changes.

3. User Stories

Epic 1: User Registration and Authentication

- As a new user, I want to register using my phone number or email so that I can access the app.
- As a returning user, I want to log in automatically using my phone number or email so that I don't have to re-enter my details.
- As a new user, I want to receive a verification code via SMS or email so that I can securely validate my identity.

Epic 2: Ride Booking and Cost Calculation

- As a user, I want to enter my pickup and drop-off locations so that I can plan my ride.
- As a user, I want to specify the number of passengers so that I can calculate costs accurately.
- As a user, I want to choose whether to share the cost of my ride so that I can reduce my expenses if needed.
- As a user, I want to see the total cost and per-passenger cost before booking so that I can make an informed decision.

Epic 3: Shared Ride Coordination

- As a user, I want to invite other passengers to join my ride so that we can share the cost.
- As an invited passenger, I want to receive an invite link with a code so that I can join the shared ride easily.

Epic 4: Payment Authorization and Management

- As a user, I want the app to pre-authorize my payment so that I know my booking is confirmed.
- As a user, I want the app to notify me if a shared ride payment fails so that I can take appropriate action (retry or adjust payment method).
- As a user, I want a backup payment option to cover failed shared ride payments so that the ride isn't cancelled.

Name: Adetola Bakinson **Designation:** IT Product Owner **Date**: 14 January 2025

Epic 5: Dynamic Pickup Management

- As a user, I want the app to prompt me when my pickup location differs from the main booking so that I can confirm or adjust my ride details.
- As a user, I want the app to recalculate costs dynamically based on new pickup locations so that I can ensure fair pricing.

4. Features

4.1: User Registration and Authentication

- Phone/email registration with OTP verification.
- Automatic login for returning users.
- Secure handling of user credentials and personal information.

4.2: Ride Booking and Cost Calculation

- Input fields for pickup and drop-off locations, time, and number of seats.
- Real-time cost calculator for total and per-passenger amounts.
- Toggle option for ridesharing.

4.3: Shared Ride Coordination

- Invite feature to share ride details with other passengers.
- Automated URL and code generation for invite links.
- Integration of invites with app download/launch.

4.4: Payment Authorization and Management

- Pre-authorization of payments during booking.
- Notification system for payment issues (failed transactions, retries).
- Backup payment method setup and handling for shared rides.

4.5: Dynamic Pickup Management

- Location-based prompts for pickup adjustments.
- Real-time cost adjustments for shared ride pickups at different locations.
- Clear communication of cost changes to all involved passengers.
