# ALAUKIK CHAUHAN

+91-95577 92916 · alaukik.chauhan@gmail.com · LinkedIn

A skilled **Full Stack Developer** specializing in **JavaScript** with **5 years** of professional experience across **FinTech**, **Internet**, and **Telecommunications** domains. Proficient in building **scalable**, **user-centric** software solutions, including intuitive **UI/UX** development, admin **dashboards**, and **data visualization**. Expertise in JavaScript and modern frameworks, delivering impactful projects with measurable results. Currently seeking a challenging opportunity to contribute technical expertise and drive impactful projects forward.

## TECHNICAL EXPERTISE

- **Frontend Technologies** - Angular, React.Js, Next.Js
- **Languages** - Javascript, Typescript
- **Backend Technologies** - Node.Js, Express.Js, Nest.Js
- **UI/UX Libraries** - Angular Material, PrimeNG, Material UI, Charts.js
- **Databases** - DynamoDB, MongoDB
- **AWS** - APIGateway, ElasticSearch, Lambda, S3, Cloudwatch, SAM
- **GCP** - PubSub
- **Version Control** - GIT, AWS CodeCommit
- **Testing Framework** - Jest, RTL
- **Others** - Agile Development, JIRA, Github Board

## PROFESSIONAL EXPERIENCE (5+ YEARS)

**TELUS Digital** **February 2024 - Present**

**Senior Application Developer**

**Tech Stack Used -** React.Js, Express.Js, Firebase, Jest, MicroFrontends, Storybook, Contentful, Micro-services.

- Led the design and development of a scalable, high-performance web application utilizing **Microservice Architecture** to streamline business operations and enhance system flexibility. The project involved breaking down a **monolithic** application into independently deployable, loosely coupled services, each focused on a specific business domain. This approach enabled independent development, faster deployments, and improved scalability.
- Reduced production defects by **50%** through comprehensive unit and integration testing using **Jest** and **Mocha**.
- Developed a Back-End-for-Frontend (BFF) layer using Express.Js and TypeScript to streamline API proxy calls, enabling efficient data filtering and downstream API communication.
- Integrated **Storybook** components into the application, ensuring consistency through a universal design system.
- Collaborated with cross-functional teams in Agile sprints to deliver features on time, achieving more than **80%** improvement in delivery efficiency.

**Incred Financial Services** **August 2022 - January 2024**

**Software Engineer**

**Tech Stack Used -** Angular, Node.Js, React.Js, PrimeNG, Axios, Reactive Forms, Formik, Charts.js.

- Optimized SME loan portal with a user-friendly interface, streamlining application processes and secure document handling, improving operational efficiency by **1.5x**.
- Designed and implemented an Auto Refund feature, automating retrieval of refund account details and customer information, reducing manual effort by **8 hours/week** of the team.
- Revamped the Credit Decision module, reducing data entry errors and improving application processing **accuracy** by **90%**. Added **data visualization** functionality to help credit managers for simplification of applications updates.
- Developed a robust customer onboarding platform from scratch, a web journey in **React.Js** and harnessing its features for seamless integration, ensuring optimal user experience and system efficiency.
- Implemented efficient data handling through **Angular's reactive forms**, leveraging **event-driven concepts**, and orchestrated efficient data flow across the application ecosystem.

**Confiance Labs** **July 2020 - August 2022**
**Full Stack Developer**

**Tech Stack Used** - Angular, Node.Js, AWS, Google Maps, CI/CD, Websockets, Elasticsearch, API Gateway, DynamoDB, Charts.js.

- Designed and developed a visually appealing and intuitive UI/UX design by using **Angular Material**, ensuring a modern and responsive user interface.
- Developed a scalable **AWS Serverless Application Model** leveraging Lambda, API Gateway, DynamoDB, and S3, reducing infrastructure costs by **50%**.
- Implemented efficient data filtering with **Elasticsearch Service**, enabling users to search for any food item, order, or customer seamlessly using a single search field in the application.
- Built an inventory management system, empowering users to dynamically modify food items and menus, increasing operational efficiency by **70%**.
- Integrated Websockets for real-time menu updates, enhancing responsiveness and flexibility for restaurant owners. Also developed **growth module** using **charts.js** for helping restaurant owners to manage revenue growth.

**InstaCiti** **April 2020 - July 2020**
**Freelance Angular Developer**

**Tech Stack Used** - Angular, RxJs, HTML5, CSS.

- In this project, I have integrated few features to enhance UI/UX experience like server side rendering of website for dynamic views.
- Stabilised admin panel and website by using common services and other angular methods for code reusability.
- Worked on e-commerce admin panel where user can dynamically change the view, data, products, etc .
- Developed panel features like dynamic submission of user data like the keys will be from the api calls and used it make form and taking the data from user accordingly.

---

## EDUCATION

**University of Pune** **2016-2020**
B.E. in Computer Engineering

**ICSE Board** **2014-2016**
High School & Intermediate

---

## KEY POINTS

- Google Maps API, Websockets Integration.
- Full Stack Development, MVVM.
- Micro-services Architecture.
- Payment Gateway Integration.
- OTP Authentication.
- CI/CD, Lambda, SAM.
