DISHA

PROFESSIONAL SUMMARY

Results-oriented Software Engineer with 5+ years of experience specializing in the design, development, and validation of front-end and back-end systems. Skilled in crafting dynamic applications using ReactJS and Angular and developing robust RESTful APIs with .NET Core C#. Experienced with SQL Server, agile methodologies, and collaborative team environments. Adept at using modern tools like GitHub Copilot and ChatGPT to enhance productivity, perform faster debugging, and improve documentation accuracy. Passionate about clean architecture, scalable design, and continuous learning.

TECHNICAL SKILLS

- **Frontend:** HTML/CSS, JavaScript/jQuery, ReactJS, Angular, TypeScript, Bootstrap, Tailwind CSS
- **Backend:** C# .NET Core, C# .NET, C# MVC, SignalR
- **Databases:** MS SQL Server, MySQL
- **Version Control & CI/CD:** Git, GitHub, TFS
- **API Development & Integration:** REST APIs, Dotnet Core Microservices, OAuth2, JWT, SSIS
- **Development Practices:** Agile, SDLC, Microservices Architecture
- **AI-Powered Tools:** ChatGPT, GitHub Copilot (for code generation, refactoring, and documentation assistance)

WORK EXPERIENCE

Senior Software Engineer

July 2024 – Currently Working

- **Description:**
  - Developed comprehensive claim forms to support filing across multiple claim scenarios.
  - Designed and implemented a Multi-Party Claim Filing feature enabling collaboration among shippers, brokers, and carriers.
  - Integrated automated email and scheduled notification workflows to streamline claim updates and communication.
  - Created data-driven insights and reporting modules to analyze claims performance by shipper, broker, and carrier.
- **Technology:** .Net core Microservices, Angular, MaterialUI, TailwindCss and Mysql
- **Responsibilities:**
  - Developed complex stored procedures and designed data insights for visual representation on charts; customized existing UI libraries to meet project requirements.
  - Implemented new features from scratch, including a commenting module (like JIRA) for seamless multi-user communication.
  - Designed and developed Excel report generation using IronXL, ensuring dynamic and user-friendly data exports.
  - Contributed to the OCR (Optical Character Recognition) module to extract data from uploaded documents and automate claim generation with the retrieved information.
  - Actively participated in Agile ceremonies, providing constructive feedback and recommendations to enhance overall user experience and system efficiency.

Senior Software Engineer

April 2024 – June 2024

- **Description:**
  - Develop an online bookstore management system that allows users to browse, search, and purchase books.
  - The system will include functionalities for both customers and administrators.
- **Technology:** .Net core Web API, ReactJS, and SSMS
- **Responsibilities:**
  - Developed and maintained a .NET Core backend with RESTful API endpoints for book catalog management and secure user authentication.
  - Collaborated with stakeholders to analyze and understand project requirements, ensuring accurate implementation of business logic.
  - Built a responsive frontend using React, integrating with backend APIs to deliver seamless functionality for the book catalog, shopping cart, and authentication modules.
  - Performed comprehensive testing, debugging, and documentation, ensuring system stability and maintainability.
  - Implemented unit testing using MS Test Framework, writing structured test cases that improved code reliability by 30%.

Senior Software Engineer

January 2023 – May 2024

- **Description:**
  - This software serves as a comprehensive solution for both payroll and recruitment needs. The entire process from finding suitable candidates, tracking their work hours, processing payroll, invoicing clients.
  - By offering diverse avenues for candidate sourcing, efficient online timesheet management, payroll processing and client invoicing within a unified platform.
- **Technology:** .NET MVC, .Net Core Web API, Angular, Stimulsoft report and SSMS
- **Responsibilities:**
  - Participated in agile ceremonies such as sprint grooming and planning, retrospective, functional review, showcase, daily standup meeting.
  - Understanding requirements.
  - Implemented and Updated Application Modules.
  - Implemented few features like AWR(Agency Worked regulation), External Payee API and more.
  - Addressed and fixed bugs.

Software Engineer

January 2021 – December 2022

- **Description:**
  - Inspect and certify product status active to scrap based on validity date using QR code scanning.
  - After inspection of product if the status is due date or already missed due date then need to replace it in nearest test center.
  - This product was divided into two functionalities. for handling backend work it was developed in MVC and for finding nearest test center and test product condition by scanning QR was developed in React website which user can access from mobile, so it was fully responsive to mobile and tablet devices.
- **Technology:** .NET MVC, Web API, WCF, SignalR, ReactJS, React-qr-code, React-qr-reader, and SSMS
- **Responsibilities:**
  - Designed and developed the frontend using ReactJS, ensuring a responsive and user-friendly interface.
  - Developed backend APIs for handling business logic and data processing.
  - Implemented user authentication, authorization and ensured data security.

- Unit Testing and Bug Fixing.

Software Engineer – Intern

July 2019 – January 2020

- **Description:**
  - A scheduling system for healthcare providers, allowing patients to book, reschedule, or cancel appointments online
  - Integrated calendar functionalities and notification systems.
- **Technology:** .NET MVC, Web API, SignalR, Angular, and SSMS
- **Responsibilities:**
  - Developed frontend components using Angular, ensuring seamless user interaction.
  - Utilized Entity Framework for database interactions, streamlining data management.
  - Implemented real-time notifications and reminders using SignalR.
