DISHA

Senior Software Engineer | Full Stack Developer

PROFESSIONAL SUMMARY

Results-oriented Software Engineer and specializing in the design, development, and validation of front-end and back-end systems. Skilled in crafting dynamic applications using ReactJS and Angular and developing robust RESTful APIs with .NET Core C#. Experienced with SQL Server, agile methodologies, and collaborative team environments. Adept at using modern tools like GitHub Copilot and ChatGPT to enhance productivity, perform faster debugging, and improve documentation accuracy. Passionate about clean architecture, scalable design, and continuous learning.

TECHNICAL SKILLS

- **Frontend:** HTML/CSS, JavaScript/jQuery, ReactJS, Angular, TypeScript, Bootstrap, Tailwind CSS
- **Backend:** C# .NET Core, C# .NET, C# MVC, SignalR
- **Databases:** MS SQL Server, MySQL
- **Version Control & CI/CD:** Git, GitHub, TFS
- **API Development & Integration:** REST APIs, Dotnet Core Microservices, OAuth2, JWT, SSIS
- **Development Practices:** Agile, SDLC, Microservices Architecture
- **AI-Powered Tools:** ChatGPT, GitHub Copilot (for code generation, refactoring, and documentation assistance)

PROJECTS

Claims Management System

- **Technology:** .Net core Microservices, Angular, MaterialUI, TailwindCss and Mysql
- **Key Contribution:**
  - Developed complex stored procedures and designed data insights for visual representation on charts; customized existing UI libraries to meet project requirements.
  - Implemented new features from scratch, including a commenting module (like JIRA) for seamless multi-user communication.
  - Designed and developed Excel report generation using IronXL, ensuring dynamic and user-friendly data exports.
  - Contributed to the OCR (Optical Character Recognition) module to extract data from uploaded documents and automate claim generation with the retrieved information.
  - Actively participated in Agile ceremonies, providing constructive feedback and recommendations to enhance overall user experience and system efficiency.

Online Bookstore Management System

- **Technology:** .Net core Web API, ReactJS, and SSMS
- **Key Contribution:**
  - Developed and maintained a .NET Core backend with RESTful API endpoints for book catalog management and secure user authentication.
  - Collaborated with stakeholders to analyze and understand project requirements, ensuring accurate implementation of business logic.
  - Built a responsive frontend using React, integrating with backend APIs to deliver seamless functionality for the book catalog, shopping cart, and authentication modules.

- Performed comprehensive testing, debugging, and documentation, ensuring system stability and maintainability.
- Implemented unit testing using MS Test Framework, writing structured test cases that improved code reliability by 30%.

End to End Recruitment Software

- **Technology:** .NET MVC, .Net Core Web API, Angular, Stimulsoft report and SSMS
- **Key Contribution:**
  - Participated in agile ceremonies such as sprint grooming and planning, retrospective, functional review, showcase, daily standup meeting.
  - Understanding requirements.
  - Implemented and Updated Application Modules.
  - Implemented few features like AWR(Agency Worked regulation), External Payee API and more.
  - Addressed and fixed bugs.

Equipment Management and Auditing

- **Technology:** .NET MVC, Web API, WCF, SignalR, ReactJS, React-qr-code, React-qr-reader, and SSMS
- **Key Contribution:**
  - Designed and developed the frontend using ReactJS, ensuring a responsive and user-friendly interface.
  - Developed backend APIs for handling business logic and data processing.
  - Implemented user authentication, authorization and ensured data security.
  - Unit Testing and Bug Fixing.

Freelancing Project for Ecommerce

- **Technology:** .NET MVC, Web API, SignalR, Angular, and SSMS
- **Responsibilities:**
  - Developed frontend components using Angular, ensuring seamless user interaction.
  - Utilized Entity Framework for database interactions, streamlining data management.
  - Implemented real-time notifications and reminders using SignalR.
