ALOK KUMAR SHARMA

GOLANG DEVELOPER

+91-9653172076 | Bengaluru, KA | alok.kumar3172@outlook.com

ABOUT ME

I am a Golang developer with 5+ years of experience in building high-performance backend systems, APIs, and microservices. Proficient in Go's concurrency, performance optimization, and clean code practices, I deliver scalable and efficient solutions.

EDUCATION

Degree	School/College/University	Year
MCA	Lovely Professional University	2017-2019
BCA	Lovely Professional University	2014-2017
HSC	Saraswati Shishu Vidya Mandir	2013
SSC	High School Arout	2011

WORK HISTORY

Sep/2024 - June/2025

American Express Engineer - III Remote - Gurugram

Payroll Name - First Meridian Golbal Services

Tech - Golang, Kubernetes, GitHub, GitHub Copilot, jUnit, Docker, gRPC, Protocol Buffers, Message Queue (Kafka), Elastic Search (Kibana)

- Provided critical support to the internal team by diagnosing and resolving port connectivity and transaction failure issues in a Go-based microservice, ensuring seamless service reliability and uninterrupted business operations.
- Increased Go code coverage by leveraging GitHub Copilot to intelligently generate comprehensive test cases for previously uncovered code lines, significantly improving overall test suite effectiveness and code reliability.
- Identified and resolved critical security vulnerabilities in Go-based repositories by conducting thorough code reviews, using vulnerability scanning tools, and implementing effective fixes to safeguard applications against potential threats and ensure secure, reliable software delivery.
- Actively engaged in continuous learning and skill development by exploring and adopting emerging technologies, tools, and best practices to stay current and drive innovation in software development.

SKILLS

- Golang
- C
- C++
- Java
- gRPC
- Protobuf
- Unit Testing
- GitHub
- Git
- GitHub Actions
- RestFul API's
- Kubernetes
- AWS-EKS
- Docker
- MySQL
- PostgreSQL
- Backend Development
- Message Queue
- Software Development

LANGUAGES

- ENGLISH
- HINDI

TOOLS

- VS Code
- Go Land
- Workbench
- PgAdmin
- Postman
- Insomania
- Kubectl

Feb/2024 - Sep/2024

Accenture **Senior Software Engineer** **Remote - Gurugram**

Payroll Name - Scorg International Pvt Ltd

Tech - Golang, Kubernetes, GitHub, Go Test, Docker, gRPC, Protocol Buffers, Message Queue (Kafka), Elastic Search (Kibana), MySQL, xGitGuard

- Provided critical production support for Comcast's applications and services, ensuring high availability and quick resolution of incidents.
- Collaborated with development and infrastructure teams to diagnose root causes and implement effective fixes in a timely manner.
- Managed and resolved production tickets, performing root cause analysis and documenting solutions to prevent recurrence.
- Maintained detailed documentation for troubleshooting procedures, system configurations, and support workflows.
- Documenting incidents, system procedures, and resolutions.
- Utilized specialized security and code analysis tools to identify vulnerabilities in Go codebases, and implemented robust fixes to enhance application security and maintain code integrity.
- Developed comprehensive unit test cases for Go-based repositories using Go's built-in testing framework, significantly increasing code coverage and ensuring robust validation of application functionality.

May/2020 - Nov/2023

Kloudone - Accuknox **Software Engineer** **Remote - Chennai**

Tech - Golang, Kubernetes, GitHub, Docker, gRPC, Message Queue (Kafka, RabbitMq), MySQL, PostgreSQL

KubeArmor Policy - https://github.com/kubearmor/KubeArmor
Kubernetes Policy - https://kubernetes.io/docs/concepts/services-networking/network-policies/

- Designed and implemented RESTful APIs following REST principles and best practices to ensure scalability and maintainability.
- Developed resource-based endpoints with clear and consistent URI structures representing business entities.
- Utilized appropriate HTTP methods (GET, POST, PUT, PATCH, DELETE) and status codes for accurate client-server communication.
- Implemented request validation, authentication, and authorization mechanisms to secure API endpoints.
- Employed JSON or XML for data serialization and deserialization to facilitate client-server data exchange.
- Documented APIs using tools like Swagger/OpenAPI for ease of use by frontend teams and third-party developers.

PROJECTS

Project Name - Webstarter Microservice Template

GitHub URL - https://github.com/beingaloksharma/webstarter-microservice-template

- Developed a scalable and efficient microservice template using the Gin-Gonic framework in Go to standardize and accelerate backend service development.
- Implemented core functionalities including HTTP routing, middleware support, error handling, and JSON data processing to ensure high-performance microservices.

- Automated build and deployment processes using Makefile to streamline development workflows.
- Designed the template to be modular and extensible, facilitating easy integration of new features such as authentication, database connectivity, and logging.
- Contributed to improved developer productivity by creating a reusable and well-documented microservice starter kit.

Project Name - gRPC-Client

GitHub URL - https://github.com/beingaloksharma/grpc-client

- Developed a command-line interface (CLI) tool in Go to interact seamlessly with a Book gRPC server, enabling efficient remote procedure calls for CRUD operations.
- Utilized gRPC and Protocol Buffers to establish high-performance, low-latency client-server communication.
- Implemented client-side logic to invoke gRPC methods and handle responses, ensuring robust and user-friendly CLI interactions.
- Automated build and management tasks using Makefile to streamline development and deployment processes.
- Demonstrated expertise in distributed systems communication and API client development using gRPC and Go.

Project Name - Angular Web Application Template

GitHub URL - https://github.com/beingaloksharma/angular-template/

- Developed a scalable and modular Angular template project using TypeScript, designed to accelerate frontend web application development.
- Implemented component-based architecture, leveraging Angular's routing, data binding, and event handling to build dynamic user interfaces.
- Incorporated responsive design principles using HTML and CSS to ensure cross-device compatibility and enhanced user experience.
- Structured the project for maintainability and reusability to serve as a starter kit for rapid Angular application development.
- Utilized Angular CLI for efficient project scaffolding, building, and testing workflows.
- Facilitated seamless integration with backend APIs to support interactive, data-driven applications.
