PROFILE SNAPSHOT

Backend Engineer with 5 years of experience building scalable, fault-tolerant systems using **Java, Golang, and Python**. Proven expertise in designing distributed microservices, crafting RESTful APIs, and working with both **SQL and NoSQL databases**. Deep understanding of **AWS services**, system monitoring, and production ownership. Passionate about creating intuitive financial experiences through thoughtful backend architecture and data-driven engineering

FUNCTIONAL EXPERTISE

PROGRAMMING LANGUAGES	WEB FRAMEWORKS/API TECHNOLOGIES	DATABASE MANAGEMENT	DevOps & CI/CD Tools	CLOUD/INFRASTRUCTURE	MESSAGING/ CACHING PLATFORMS
• Golang • Java • Rust • Python	• Nodejs • REST • GraphQL	• MySQL • Postgres • MariaDB • MongoDB	• Jenkins • GitHub • GitLab • CI/CD	• AWS • GCP • Kubernetes • Docker	• Kafka • Redis

NOTABLE ACHIEVEMENTS

- **Innovative Payment Solution**: Led the development of India's **Retail-CBDC** ecosystem, delivering a secure, scalable platform for high-speed digital transactions, reducing transaction time by 40%, and accelerating the transition toward a cashless economy.

- **Blockchain & Fintech Solution**: Spearheaded a decentralized platform for tokenizing $10K+ in institutional-grade virtual assets, leveraging DeFi NFTs integrated with Shopify's e-commerce portal.

- **Supply Chain Optimization**: Directed the implementation of a cutting-edge Coal Supply Chain Transportation System (CSCTS). This solution improved operational efficiency by 30%, cut logistical costs by 20%.

FUNCTIONAL EXPERTISE DEMONSTRATED

National Payments Corporation of India (NPCI)

A FinTech firm| Umbrella body for retail payments and settlement systems in India
08/2023 - present

Senior Associate Blockchain

Project: R-CBDC (Retail Central Bank Digital Currency) – RBI Initiative

- Led development of a **secure digital currency platform** using **Golang** and **Hyperledger Fabric and AWS** to support scalable, compliant financial operations.
- Successfully made the R-CBDC project live across **18 major banks**, advancing India's digital payment landscape.
- Streamlined retail payment and settlement frameworks, significantly improving reliability, scalability, and transaction throughput.
- Contributed to strategic decision-making and execution, aligning project outcomes with key organizational goals.

IQuantum Solutions Private Limited

A Blockchain FinTech firm
01/2022 -08/2023

Senior Software Engineer

- Designed and developed **BCware NFT dApp**—a decentralized NFT marketplace builder for Shopify.
- Built and deployed decentralized applications using **Golang, Ethereum, and Polygon and AWS,** allowing seamless integration of NFTs with physical products, enhancing engagement and monetization.
- Orchestrated the end-to-end development of a real-time platform that **tokenizes** institutional-grade virtual assets in a legally compliant and decentralized manner.

Elogicsquare Analytics Private Limited

A Coal Supply chain management firm
11/2020–01/2022

Software Development Engineer

- **Designed and delivered the Coal Supply Chain Transportation System (CSCTS)** for Hindalco (Aditya Birla Group) to streamline coal logistics through automated inspections, weighbridge allocation, and quality sampling workflows.
- Developed **Java-based backend services** and **Python scripts** to calculate **Gross Calorific Value (GCV)** for efficient blending, ensuring consistent fuel quality and optimized resource allocation.
- **Leveraged Big Data, Cloud Computing, AWS and Mobility** solutions to solve complex supply chain challenges, significantly enhancing operational efficiency across mining and transportation processes.

RELEVANT PROJECTS

- **Wholesale CBDC (wCBDC)**: Designed and optimized interbank settlement modules as part of a wholesale CBDC pilot, significantly improving transaction speed, transparency, and liquidity management across financial institutions.

- **Programmable CBDC (pCBDC):** Developed programmable CBDC functionality using smart contracts to support conditional payments, including features such as fund expiration, usage restrictions, and purpose-specific spending controls.

- **eCheck Project:** NPCI's eCheck project modernizes India's traditional check payment system by digitizing the clearance process with **Golang**.By allowing electronic submission, verification, and clearing of checks, it streamlines operations and strengthens security, eliminating the need for physical check handling.

- **RWA Project:** IQuantum Ecosystem Network offers a decentralized platform using **Golang**, Ethereum and Polygon for tokenizing real-world assets, providing liquidity and passive income opportunities. This transparent, tech-driven approach grants asset holders' immediate liquidity access and supports quick onboarding of assets for seamless transactions.

- **Coal Supply Chain Transportation System (CSCTS):** Implemented for Hindalco, this system streamlines coal movement through automated processes such as entry inspections, weighbridge allocation, and quality sampling. Developed **Python** scripts to calculate **GCV (Gross Calorific Value)** for effective blending and resource allocation and **Java** services in Backend.

EDUCATION

2022-2024 Bangalore, India	**Software Engineering | MTech** **BITS Pilani (WILP)**
2015 – 2019 Bangalore, India	**Electronics and Communications Engineering | BE** **PES University**
2013 – 2015 Bangalore, India	**Science | 11th & 12th** **St. Joseph's Pre-University College**
2001 – 2013 Bangalore, India	**Science | Up to 10th** **Cathedral High School**
