Aniket Maini

Software Engineer Lead

Software engineer with 4 years of experience building scalable cloud-native applications and SaaS platforms using Golang, Java, Postgres, Kafka, Kubernetes. Passionate about crafting efficient, innovative solutions and continuously honing skills to drive impactful results. Committed to contributing to dynamic teams and tackling complex challenges to deliver exceptional outcomes.

EXPERIENCE

Capgemini (Cisco), Bangalore — *Software Engineer Lead*

Dec 2023 - PRESENT

- PIAM revolves around a centralized platform for access and policy management within the Cisco security products ecosystem. This includes integration of various Cisco products, such as Secure Access, Cisco AnyConnect, and Cisco XDR, under a unified IAM management system to streamline access control and policy enforcement, ensuring consistent security measures and user experiences.
- Gathered requirements, crafted architectural designs, and conducted proof of concepts (PoCs) to validate solution feasibility
- Designed and developed scalable backend services using microservices architecture
- Spearheaded the design and development of scalable backend services and APIsusing microservices architecture.
- Working on maintaining context-service, Context Service provides a complete picture of an asset (users, devices, applications, workloads and networks) with collective information from multiple sources.
- Led context-service in migrating from on-prem Kubed environment to Amazon EKS.
- Designed and implemented kafka-based event-driven architecture in Go modules to decouple microservices and ensure scalable and resilient communication between distributed systems..
- Used Kibana to visualize all the logs and inspect production scenarios.
- Setup monitoring, alerting tools using Grafana.
- Worked on bringing up the concurrent flows in Golang using Go Routines, go channels etc.
- Worked on building the architecture design for the new features.
- Gave demos to the PMs for the newly built features.
- Conducted code reviews and played a key role in improving code quality and team productivity.

  Technologies Used: Go / Golang, Java, Gin, Spring Boot, PostgreSQL, GIT, AWS, Postman, Docker, Kafka, Kubernetes, JUnit, Mockery, Mockito, Grafana, Kibana, Github Actions

SKILLS

My skills include a deep knowledge of **Go, Microservices, Postgres,API, Kafka, Java ,Docker, Kubernetes, Grafana and Kibana .** I am proficient in Secure Coding SDLC and Agile Methodology, which ensures that I deliver high-quality code that meets the most rigorous security standards.

Languages: Go / Golang, Java

Framework: SpringBoot, Hibernate, Gin, ReactJS

Data Processing: MySQL, PostgreSQL, Kafka

Data Visualization: Grafana

Technologies: GIT, Jenkins, AWS, Postman, Ansible, Kubernetes

Other: Test Driven Development, Unit Testing, Functional Programming, Microservice Development, Agile Method, Eclipse, VS Code, Mockery

LANGUAGES

English (Full Proficiency)

HCL Tech (Office Depot), Noida — *Software Engineer 2*

Aug 2022 - Dec 2023

- Worked as a Software Engineer at Office Depot, contributing to the development and enhancement of technology solutions that support retail operations and customer experience.
- Worked on an e-commerce domain, we developed a new pipeline for Office Depot's platform using Go / Golang, Gin Gonic, PostgreSQL, GIT, Jenkins, AWS.
- Created a microservice architecture to fetch and process customer data.
- Set up new APIs and microservices according to the requirements.
- Ensured code coverage of at least 90% for all services.
- Responsible for onboarding new team members.

  Technologies Used: Go / Golang, Gin, PostgreSQL, GIT, Jenkins, AWS, Postman, Ansible

HCL Tech (IBM), Noida — *Software Engineer 1*

Apr 2021 - Aug 2022

- Worked as a Software Engineer for IBM Maximo, focusing on enhancing and maintaining enterprise asset management solutions to optimize asset lifecycle and operational efficiency for global industries.
- Worked on an enterprise asset management app, we developed a web-based enterprise asset management solution based on client requirements.
- Contributed to the development of the technician app.
- Customized and extended Maximo applications using Java.
- Resolved approximately 2 bugs daily across multiple Maximo apps.
- Wrote Unit and functional tests for developed functionality.
- Developed and executed Test Cases/Test Plans to ensure objectives were met.
- Conducted quality testing across browsers, devices, and OS in connected and disconnected modes.
- Performed Web Automation using TestNg and Selenium server.
- Initiated Golang training and created new projects in Golang.
- Started on Golang training. Created new projects in Golang. **Technologies used**: **Java**, **Spring Boot**, **Java Script**, **Chrome Dev Tools, MySQL, Postman, Android App Studio, Golang**

EDUCATION

University of Petroleum and Energy Studies (UPES), Dehradun B.Tech Computer Science with Specialization in Cloud Computing and Virtualization Technology (7.76 CGPA)

Aug 2017 - Apr 2021

French (DELF B1 Certified)

Hindi (Native)

Punjabi (Native)
