Professional Summary

Backend/platform engineer with **3+ years** building scalable microservices and APIs using **Go (Golang)** and **React.js**. Delivered low-latency **REST/GraphQL APIs**, resilient event-driven systems, and platform services for enterprise retail and logistics. Experienced in **Docker, Kubernetes, AWS, PostgreSQL optimization, Kafka, and CI/CD automation.**

Technical Skills

Languages: Go, JavaScript (ES6+), TypeScript, React.js, Tailwind CSS, SQL, Python (scripts/tooling)
Backend: Go, RESTful APIs, gRPC, gRPC-Gateway, GraphQL, Microservices, TDD
Databases: PostgreSQL, MongoDB, Redis
Messaging/Streaming: Apache Kafka (producers, consumers, retry/backoff, lag monitoring)
Container Orchestration: Docker, Kubernetes, Helm
Cloud: AWS (ECR, S3, ECS/EKS, CloudWatch)
CI/CD: Git, GitHub Actions, Jenkins, ArgoCD
Observability: Prometheus, Grafana, Alertmanager
Workflow Orchestration: Temporal (workflows, retries, timeouts)

Experience

Accenture (Client: Maersk) June 2022 – Present
Software Engineer Analyst *Bengaluru, IN*

- Built and maintained backend services in Go for the **Maersk Developer Platform (MDP)**, enabling standardized CI/CD pipelines, runtime environments, and secure developer tooling.
- Developed and maintained **Maersk Secrets Storage (MSS)** for encrypted secret management, ensuring least-privilege access and secure secret rotation.
- Architected cloud networking and containerized workloads using Docker, Kubernetes, and Helm on AWS (EKS, ECR, CloudWatch) for scalable and secure deployments.
- Implemented PostgreSQL-backed microservices exposing REST/GraphQL APIs; integrated **Kafka** and **Temporal** for reliable event-driven workflows and durable orchestration.
- Established CI/CD pipelines with **GitHub Actions** and **GitOps (Argo CD)**, automating builds, security scans, and environment promotions.
- Implemented observability stack using **Prometheus, Grafana, Alertmanager** with SLO dashboards, metrics, and proactive alerting for system reliability.
- Implemented pytest based checks for JSON contract validation in non-critical paths, complementing Go test suites and raising pipeline quality gates
- Defined repeatable infra components with **AWS CDK** for EKS and ECR networking, enabling consistent, reviewable changes and faster environment bootstraps.
- Participated in code reviews and design discussions, enforcing PR templates, test coverage, and secure defaults across services.

Projects

Basic Arithmetic gRPC Server | *SEE PROJECT*

- Developed a **gRPC** server with **gRPC-Gateway** to create a reverse proxy and protobuf definitions to perform arithmetic operations (add, divide, multiply, subtract) via REST and gRPC endpoints.

Google Sheets 2.0 | *SEE PROJECT* March – April 2024

- Rebuilt Google Sheets clone in React/TypeScript achieving **60% performance of original**, addressing V1.0's scalability issues by implementing infinite scrolling for **10,000+ rows** vs previous 100-row limitation.
- Replaced DOM-heavy architecture with canvas-based virtualized rendering, solving performance degradation to achieve consistent **60fps** interactions with 40% reduced memory usage.
- Migrated from vanilla JavaScript to modern development stack (TypeScript, Vite, React hooks), improving build times by 35% and eliminating 90% of runtime errors.

Education

Kalinga Institute of Industrial Technology (KIIT) Aug 2022
Bachelor of Technology, Electronics and Telecommunication *Bhubaneswar, India*

Awards & Certifications

GitHub Copilot Certification Aug 2025
AI-assisted development and enterprise workflow automation.

Pinnacle Award (FY25 North Star), Accenture July 2025
Recognized for outstanding technical performance and delivery excellence.
