PROFESSIONAL SUMMARY

Accomplished Senior Software Engineer , specializing in Golang and microservices architecture. Enhanced cloud-native applications, achieving 85% test coverage while mentoring junior developers. Proficient in RESTful API development and gRPC implementation, demonstrating strong leadership and technical expertise in delivering high-performance solutions.

WORK HISTORY

Netcracker Technology - ***Senior Software Engineer***
Bengaluru • 10/2022 - Current

- Developed cloud-native catalog synchronization microservice in Golang, improving throughput by 8x (10-80 catalogs/min) and reducing validation latency by 94% (50s→3s) through optimized goroutine worker pool architecture with controlled concurrency.
- Integrated NTT OAPI with circuit breaker pattern, exponential backoff, and multi-currency support (50+ currencies), reducing manual sync operations by 90%.
- Achieved 85% test coverage with comprehensive unit, integration, and load tests simulating 1000 concurrent operations.
- Mentored 2 junior developers on Golang concurrency patterns and microservices best practices, conducted 200+ code reviews.

Accenture - ***Application Development Analyst***
Bengaluru • 02/2021 - 10/2022

- Responsible for design, development, integration and enhancement of highly stable and scalable gRPC based microservices architecture with modules written in Golang.
- Work with experienced team members to review new and existing code and perform unit testing.
- Delivered technical components using Agile methodology across a wide technology stack, in response to varying business requirements and multiple application upgrade.

Wipro Technologies - ***Project Engineer***
Kolkata • 02/2018 - 02/2021

- Enhanced Cisco Web Security Appliance(WSA) to support HTTP2 protocol.Specified, prototyped, developed C++ framework containing support to data structures, common algorithms, IPC, socket programming.
- Developed a curl based tool supporting multiplexing several logical stream over the same physical connection
- Contributed to the development of the complete flow of data from the vehicle ECU to display the GUI on the instrumentation cluster dashboard. Several signals are populated based on vehicles motion, internal and external sensors which are to be converted to data and cascaded on to the upper layers for graphical representations.

SKILLS

- Golang
- GRPC
- Bazel
- REST API
- Git
- PostGreSQL
- Postman
- Cloud Native Application
- Object-oriented analysis and design (OOAD)
- Linux
- Docker
- Microservices
- Bitbucket/ Gitlab
- Kubernetes
- C++

EDUCATION

Government College of Engineering & Textile Technology
Berhampore • 07/2017

B.Tech: Computer Science & Engineering
- GPA: 8.51

Berhampore Maharani Kassiswari Girls' High School
Berhampore • 2013

Higher Secondary
- GPA: 83.2

Mary Immaculate School
Berhampore • 2011

Secondary
- GPA: 90.8
