SAVITRI SONNAD

GoLang Developer

Email: savitrisonnad1993@gmail.com

Mobile: +917349195380

Objective:

Looking for a long-term association with an organization where I can use my skills and knowledge to deliver value added results as well as further enhance my learning and develop my knowledge for the growth of the organization.

Experience Summary:

- Having 7 years of experience in IT industry in web applications which includes Golang and Blockchain application development using Hyperledger fabric platform.
- Developed and tested highly reliable and scalable Golang applications.
- Maintained and enhanced existing applications, optimizing performance and improving user experience.
- Contributed to a major software project.
- Utilized Golang frameworks like Gin and Revel to deliver robust applications.
- Integrated Golang applications with PostgreSQL database.
- Automated repetitive tasks through containerization using Docker.
- Hands on experience with the Golang language and integrating various stacks including JavaScript, ReactJS, NodeJS and JSON.
- Experienced in Golang microservices using channels, routines, functional interfaces and various frameworks.
- Experienced with backend SQL platforms and connecting GO with MySQL and PostgreSQL databases.
- Hands on experience in writing complex queries using SQL.
- Experience in all phases of SDLC including Requirement analysis, Design, Development, Testing, Implementation and Maintenance.
- Proficient with REST API's, web applications and Blockchain applications.
- Good experience with GoLang drivers to perform operations such as CRUD operations and writing queries with SQL server.
- Hands on experience with version control tools such as GitLab for source code management.
- Experience contributing to the design and implementation of Blockchain systems with key focus in the areas such as consensus, distributed ledger and smart contracts using Go Language and Node js.
- Experience with container-based deployments using Docker, working with Docker images. .
- Writing smart contract (Chaincode) using GO Language, JavaScript.
- Involved in the integration of Blockchain systems with front end through REST API.
- Configuring the SOLO and KAFKA server cluster for the Ordering service in Hyperledger Fabric.
- Involved in single node, multi node and multi organization setup for Hyperledger Fabric.
- Creating and validating participants in the Blockchain network through SDK usingCAs.
- Good knowledge in Microservices and Kubernetes
- Good Knowledge on Amazon Web Services (AWS) using EC2.

Technical Expertise:

Operating Systems	:	Windows, Unix/Linux
Language/Technology	:	Golang, Core Java, SQL, Spring, Hibernate.
Web Technologies	:	HTML, CSS, Javascript, Node JS, React JS
Database	:	MySQL, PostgrSQL, Oracle DB
IDE	:	Eclipse
Framework	:	Gin, Revel, Hyperledger Fabric, Ethereum.
Development tools	:	IntelliJ IDE, Visual studio, Docker, SQL Developer, Hyperledger Composer

Educational Qualification:

Completed Master of Science [MSc] in Computer Science 1st Rank Gold Medalist from Rani Channamma University, Belagavi in the year 2016.

Training and Certifications:

- Core Java and J2EE training from Uttara Info Solutions, Bangalore.
- IBM certified Blockchain Foundation Developer.
- IBM certified Blockchain Essentials.
- IBM certified Docker Essentials

Organizational Details:

- Previously worked as a Software Consultant - in HOONARTEK for client IDFC First Bank, Pune Maharashtra from May 2022 to Feb 2025.
- Previously worked as a Golang Developer – in ECLAT INFOTECH PVT LTD, Indore from March 2021 to May 2022.
- Previously worked as a Software Developer - GoLang in EVENION TECHNOLOGIES PVT LTD, Bangalore from Sep 2020 to February 2021
- Previously worked as a Software Engineer in iNETFRAME TECHNOLOGIES PVT LTD for client PwC India, Bangalore from Nov 2018 to Aug 2020.
- Previously worked as a Software Engineer in Chipmonk Technologies Pvt Ltd, Bangalore from Feb 2018 to Nov 2018.

Project Experience:

1. **Listmonk**

Team Size	:	20+
Role	:	Golang Developer (Consultant)
Duration	:	May 2022 to Feb 2025
Skills	:	Golang, MySQL, PostgreSQL, React JS, Node JS

Project Synopsis:

- Listmonk is a self – hosted, high-performance one-way mailing list and newsletter manager.
- It is communication service for the bank.
- 80 to 90% bank's communication goes through this hub.
- Communication happens through SMS, Whatsapp, Email, IVR and Channels.
- There are two parts in this project one is core part and other is pdf engine.
- Core part consists sending messages like transactions, offers etc based on the template to the customer.
- PDF engine consists of generation of pdf like SOA, Rejection letter etc and sends to customer through core part.

Roles & Responsibilities:

- Involved in SDLC analysis, design, development and testing of application, developed using AGILE/Scrum methodology.
- Developed and implemented software applications and systems using various technologies including Golang, Docker etc.
- Used Golang and developed microservices using Channels, goroutines, functional interfaces and various frameworks.
- Developed Golang Microservices and converted the user stories into backend logic in service classes.
- Developed Rest API to process the data from DB to another Rest service using Golang.
- Developed Golang software to handle concurrent data collection and processing with goroutines and channels.
- Created new API's using Golang
- Implemented query functionality while mapping front end code backend by a priority of native SQL, GORM Queries.

- Enhanced, fixed functional and performance related bugs in core product written in Golang
- Written user and technical documentation.
- Developed Web API's using Node JS and React JS.
- Worked in making AJAX calls using jQuery and usage of JSON for faster and impulsive responses.

2. Charidy

Team Size	:	10
Duration	:	March 2021 to May 2022
Role	:	Golang Developer
Skills	:	Golang, MySQL, Elastic Search

Project Synopsis:

Worked for one of the leading Non-profit organizations involved in raising funds through donation and crowdfunding for clients across the world. We developed the admin, support, operation's sites which are being used for managing different types of Campaigns, donations. Developed customization features to support creation, listing, create, updating, clone, deletion on the donations & campaigns, user profiles, roles, permissions, lead management, elastic dynamic search, integration with AWS & Rackcdn servers. Developed functionality to support User & Roles management, integration with email servers, dashboards and multiple third-party applications. Charidy helps in making easy and effective fundraising process. Leading Non-profits organizations use Charidy to accelerate their growth and strengthen their communities.

Roles & Responsibilities:

- Involved in different stages of product development like Requirement Analysis, Design, Environment Setup, Coding.
- Backend code development using Golang.
- Involved in Database design.
- Involved in Database management.
- Involved in writing REST API's for new requirements.
- Involved in Creation of models.
- Involved in Creation of mock data based on requirements and handled entire Backend process.

3. Happy Locate - Relocation Platform

Client	:	HappyLocate
Team Size	:	6
Role	:	GoLang Backend Development
Duration	:	Sep 2020 to Feb 2021
Skills	:	Golang, MySQL, Laravel (PHP framework)

Project Synopsis:

HappyLocate, India's first one stop relocation platform, was conceptualized to reform the way India relocates. Customer experience has been HappyLocate's prime focus and therefore happylocate empanelled only Original, Reputed Established and Reliable Packers Movers on the platform. Packaging guidelines, Quote comparison and automation infused at each stage of relocation while coordinating end to end movement. HappyLocate own an Enterprise Solution (A customizable technology) for Corporates to help them manage end to end Employee's relocation.

Roles & Responsibilities:

- Involved in different stages of product development like Requirement Analysis, Design, Environment Setup, Coding.
- Backend code development using Golang.
- Involved in Database design and Database management.
- Involved in writing REST API's for new requirements.

4. Blockchain based ATM Reconciliation.

Client	:	A public-sector nationalized bank in India
Team Size	:	3
Role	:	Blockchain Development
Duration	:	Sep 2019 to Aug 2020
Skills	:	Hyperledger Fabric, Golang, Javasript, Docker, UNIX

Project Synopsis:

Blockchain-based reconciliation application to automate reconciliation of ATM transactions. Real-time data access from ATM, ATM switch and Core Banking Solution, and storing on Blockchain ledger. Comparison and reconciliation of data received from different ATMs with central applications. Reporting and monitoring of the transactions in real-time ATM-wise analysis of cash availability and transaction pattern.

Roles & Responsibilities:

- Setting up of Hyperledger Fabric network at the bank's servers
- Developed the backend application using node.js and wrote Chaincode using GO Lang.
- Created Docker images using Docker file, worked on Docker container, removing images.
- Deployed the application at bank's server and integrated it with the bank's DB.
- Integrated the backend application with the Chaincode using node-sdk.

5. GateKeeper and ConsentKeeper

Time Size	:	3
Role	:	Blockchain Development
Duration	:	Nov 2018 to Sep 2019
Skills	:	Hyperledger Fabric, Golang, JavaScript, Docker, UNIX
Client	:	Karnataka Gov't

Project Synopsis:

ConsentKeeper is mechanism which runs between digital payment and central payment system where digital payment is a way of transaction which is made through digital modes. In digital transaction, user (payer) and client (payee) both use digital modes to send and receive asset in terms of consent for verification and validation. It is an easiest and convenient way to make the transactional activities like add user, transfer asset, ensure authentication, EKYC, birth certificate, providing E-certificate etc.

GateKeeper is mechanism which performs task like Treasury bills, debt instrument, treasury bill with zero coupon securities and pay no interest and validating the treasury before it process requested by different government departments in secure way to avoid un authenticated, duplicacy, identify authority on authorized sources within certain time stamp.

Roles & Responsibilities:

a. Writing smart contract/Chaincode using Hyperledger Fabric/Golang/Java Script language.
b. File parsing through REST API in middle layer using GoLang.
c. Created Docker images using Docker file, worked on Docker container, removing images.
d. Involved in the integration of Blockchain systems with front end through REST API.
e. Creating and validating participants in the Blockchain network through SDK using CAs.
f. Prepared documentation for the future requirements.
g. Involved in different stages of product development like Design, Environment Setup, Coding and production Deployment.

6. Digital Payment Ledger

Client	:	Karnataka Govt.
Team Size	:	3
Role	:	Blockchain Development
Duration	:	Nov 2018 to Feb 2019
Skills	:	Ethereum, Golang, Database Management, UI Design

Project Synopsis:

Payment Ledger is a payment system having common ledger having a real time reconciliation on Blockchain and this application is built on Ethereum.

Roles & Responsibilities:

a. Writing smart contract/Chaincode using Golang/Java Script language.
b. Involved in the integration of Blockchain systems with front end through REST API.
c. Created Docker images using Docker file, worked on Docker container, removing images.
d. Creating and validating participants in the Blockchain network through SDK using CAs.
e. Prepared documentation for the future requirements.
f. Involved in different stages of product development ilke Design, Environment Setup, Coding and production Deployment.

7. Smart Lighting (IoT Project)

Client	:	Havells India Ltd
Team Size	:	5
Role	:	Application Development
Duration	:	Feb 2018 to Nov 2018
Skills	:	Golang, JavaScript, UNIX, Postgre SQL, AWS

Project Synopsis:

Controlling street lights through web application. The status of the light will be displayed on the map. Lights can be controlled individually and in group. Each type of lights will be having its own network server. Light will communicate with their respective network server. And these network servers will communicate with Streetcom core.

Roles & Responsibilities:

a. Backend code development using Golang.
b. Involved in the integration of Backend systems with front end through REST API.
c. Implementing routing technique in Golang using Gorilla mux as request router.
d. Involved in Database management.
e. Analysing the code as per the client requirements and taking appropriate action.
f. To optimizing the queries for increase performance.
g. Involved in different stages of product development like Design, Environment Setup, Coding and production Deployment.

I, the undersigned, certify that to the best of my knowledge and belief, this CV correctly describes myself, my qualifications, and my experience. I understand that any wilful misstatements described herein may lead to my disqualification or dismissal, if engaged.

Date: 24/10/2025
