Job Description

Blockchain Developer & Sr. Blockchain Developer

JOB DESCRIPTION

ABOUT US

Following the footsteps of the “father of value investing”, Benjamin Graham, Kalkine was founded with an aim of channelizing energies and enthusiasm towards the stock market into something that operates for the greater good and benefits people at large.

The founding blocks, ethics and code of conduct were laid and our CEO, Mr. Kunal Sawhney started to put together people who he thought could understand his vision. From very humble beginnings, we took every day as it came and still believe it to be day zero for us in terms of where we wish to reach. Slowly we found our very loyal subscriber base and worked relentlessly to make sure, we delivered on our promise. The promise to build long lasting relationships based on trust.

Today we are a strong and driven team of over five hundred people spread out in India, Australia, UK, New Zealand and will soon spread out to Canada and US. Stock markets and their movements in these countries are the lifeline of our organization.

Kalkine started in February 2014 when the optimism, knowledge, and belief of one entrepreneur became a vision and passion to provide recommendations to investors about the right timing and pricing to achieve their goals.

To provide investment ideas to clients that enable them to navigate and achieve success in the complex markets, we, at Kalkine understand that Stocks are subject to swings or market fluctuations on an ongoing basis and more importantly how to take advantage of these fluctuations.

JOB TITLE	Blockchain Developer & Sr. Blockchain Developer
FUNCTIONAL REPORTING	Head Of Department – Engineering
JOB LOCATION	Noida
OBJECTIVE	Development of Blockchain and Cryptocurrency projects
KEY RESPOSIBILITIES	• 4+ years in blockchain development and cryptocurrency projects. • **Blockchain Development:** Design and develop blockchain-based applications, with a focus on Ethereum-based systems and decentralized applications (dApps). • **Crypto Wallet Integration:** Implement and manage secure cold wallet solutions for crypto asset storage and transactions. • **Trading and Market Data:** Basic knowledge of Integration of TradingView, building Python/Nodejs -based algorithms for crypto market analysis, and trading strategy development.

	• **Smart Contract Development:** Write and deploy smart contracts on Ethereum, ensuring their security, reliability, and efficiency. • **Cold Wallet Storage:** Develop and maintain solutions for secure cold storage for cryptocurrencies, ensuring high-level protection of assets. • **API Development:** Build and integrate APIs to support crypto transactions, blockchain data interactions, and wallet functionality. • **Optimization:** Optimize blockchain systems for better performance, scalability, and security. • **Collaboration:** Work closely with the product team to integrate blockchain solutions into existing infrastructure, ensuring seamless user experiences and functional back-end systems. • **Research & Innovation:** Stay up-to-date with emerging blockchain trends and technologies, continuously improving solutions and methodologies. • **Security Focus:** Prioritize the security of wallet storage and transaction systems, addressing vulnerabilities and ensuring user safety. • **Database:** MongoDB, PostgreSQL or other.
YEARS OF EXPERIENCE	Minimum 4+ years of experience
QUALIFICATION	Any UG/PG/Diploma (B.Tech /BCA/MCA / BSc-IT or any IT Stream)
Desired Candidate Profile	• Strong understanding of blockchain technologies, particularly Ethereum, and experience with Ethereum-based solutions. • Proficiency in Python/Node.js for blockchain application development, crypto wallets, and trading algorithms. • Deep knowledge of both hot and cold wallet systems for secure crypto asset storage and management. • Solid experience with writing, deploying, and testing Ethereum smart contracts. • Experience with integrating blockchain APIs (e.g., Web3.py, Bitcoinlib, Ethereum APIs). • Knowledge of DeFi protocols, token standards (ERC20), and NFT technologies. • Strong focus on secure transaction processing and crypto asset protection using cold storage techniques. • Good Communication skills.
