Pintoo Kumar

Senior React Engineer | React.js, Next.js, TypeScript, MUI, Redux, GraphQL

Professional Summary

Frontend Engineer with 8+ years of experience, specializing in React.js and Next.js ecosystems for building scalable, high-performance, and responsive web applications. Expert in UI architecture, component design, and state management using Redux and React Query. Skilled in integrating GraphQL, REST APIs, and real-time communication (WebSockets, Supabase Realtime).

Strong background in TypeScript, MUI/TailwindCSS, and micro-frontend patterns, with solid backend knowledge of Node.js and DevOps experience using Docker and Kubernetes. Passionate about performance optimization, clean code, and AI-powered automation to deliver modern, interactive, and intelligent web interfaces.

Core Skills

- **Frontend:** React.js, Next.js, Redux, React Query, TypeScript, MUI, TailwindCSS, Styled-Components
- **Backend (Secondary):** Node.js, Express.js, NestJS, GraphQL (Apollo), REST APIs
- **Realtime & Integrations:** WebSockets, Supabase Realtime, Stripe, Razorpay, OpenAI, Claude 3
- **Testing & Quality:** Jest, Cypress, React Testing Library, Mocha, Chai
- **Cloud & DevOps:** Docker, Kubernetes, GitHub Actions, AWS, Azure
- **Design & Tools:** Figma, Storybook, Responsive UI Design, Accessibility (WCAG)
- **Other:** CI/CD, Agile, Supabase Auth, API Documentation (Swagger)

Selected Projects

1. DocVenture

A digital document automation platform enabling **AI-driven contract creation and approvals**.

- Built a **responsive, component-based UI** using **Next.js, React.js, MUI, and Apollo Client**.
- Integrated **OpenAI GPT-4o and Claude 3** for smart document drafting and workflow automation.
- Implemented real-time collaboration and notifications using Supabase Realtime.
- Enhanced UI/UX with MUI theming, lazy loading, and accessibility improvements.
- Deployed on **Azure** using GitHub Actions pipelines with observability via Grafana.

---

2. Title-Direct

A **real estate and mortgage management platform** built with React-first architecture.

- Designed a scalable **Next.js dashboard** with modular components and MUI-based design system.

- Integrated **GraphQL APIs** for mortgage workflows and document automation.
- Implemented **role-based access control** and dynamic form rendering.
- Optimized page speed and bundle size through **code-splitting and SSR (Next.js)**.
- Collaborated on CI/CD integration with Docker, Helm, and Azure AKS.

---

3. E-Commerce Platform

A complete **MERN-based e-commerce solution** with real-time order tracking and payment integration.

- Developed UI with **Next.js, Redux, and TailwindCSS** ensuring responsive cross-device layouts.
- Integrated **Stripe and Razorpay** for payments; added real-time cart and order updates.
- Implemented GraphQL queries and caching for product listings.
- Delivered dark-mode support, animations, and user analytics dashboards.
- Deployed containerized frontend via Docker and Kubernetes.

---

4. Supply Chain Management System

A **blockchain-enabled vaccine shipment tracker** with IoT-driven updates.

- Designed **React.js dashboard** to visualize real-time temperature, geolocation, and blockchain status.
- Created reusable chart components using **Recharts and D3.js**.
- Integrated WebSocket feeds and Supabase Realtime for live shipment tracking.
- Collaborated with backend teams on REST/GraphQL APIs in Node.js.
- Automated CI/CD deployment and version control workflows in GitHub Actions.

---

5. Web3 Backend APIs (Frontend Integration)

Decentralized **NFT marketplace and token issuance** frontend.

- Implemented UI with **React.js + Redux Toolkit** for token minting and wallet connection.
- Integrated **ethers.js** for MetaMask and blockchain operations.
- Developed NFT listing and transfer pages with live activity feeds.
- Enhanced API consumption via Apollo Client and GraphQL fragments.

---

6. DeFi Lending Platform

A **DeFi dashboard** allowing users to lend, borrow, and view on-chain transactions.

- Built **React + TailwindCSS SPA** for decentralized lending visualization.
- Integrated smart contract APIs and Supabase Edge Functions.
- Added AI-powered insights for portfolio analytics using GPT-4o and Claude 3.
- Performed performance profiling and Lighthouse optimization.

Education & Certifications

- B.Tech in Electrical Engineering – Krishna Institute of Engineering & Technology
- **Docker & Kubernetes: The Complete Guide** – Udemy
- **Full Stack Web Development with Node.js and React** – Udemy
