Education

Indian Institute of Technology, Gandhinagar — Gandhinagar, Gujarat
MTech Computer Science *GPA: 8.00* — July 2019 - July 2021

Pune Institute of Computer Technology — Pune, Maharashtra
BTech ELECTRONICS AND COMMUNICATION *GPA: 7.5* — July 2014 - June 2018

Experience

PaywithRing | Kissht — Remote(Mumbai)
SDE-II — April 2023 - Present

- Backend Developer in the Next-Gen/Shared-Services Team (11 members): Responsible for designing and implementing backend features for the Ring App, with a focus on API development and integrating third-party services. Contributed to the development of tools such as Flagsmith (feature flagging) and Kafka Connectors for seamless data streaming and processing.
- Dockerfile Development and Service Testing: Developed and optimized Dockerfiles for containerization of various services, ensuring efficient build processes and streamlined deployments. Conducted thorough testing on test servers to validate the functionality, performance, and reliability of services before production deployment.
- Golang Boilerplate Development, Migration, and Airflow Integration: Led the development of a robust Golang boilerplate, now adopted by nearly 80% of the tech team. Managed the migration of legacy services to the Golang framework, enhancing scalability and maintainability. Integrated Apache Airflow for workflow automation and orchestration in Golang services, improving task scheduling and data pipeline management.
- Technology Stack and Tools: Proficient in multiple programming languages including Python, Go, and C++ to develop scalable and efficient backend solutions. Extensive experience with tools such as Postman (for API testing), Kafka (for event streaming and data pipelines), and Datadog (for monitoring and observability).

Qualcomm — Bangalore, Karnataka(Hybrid)
ENGINEER — July 2021 - March 2023

- Successfully worked as a Backend Engineer in a team of 30 people in the Graphics software Team with developing and managing tools and infrastructure.
- Worked on the handling of the microservices architecture (VIS) connected with different projects and repos. Efficiently reduces the workload of the architecture by 25 % by modifying API calls in the codebase
- Exhibited skills in developing several automation scripts using python to automate development tasks along with efficient management of the distributed system
- Worked on reducing the divergence between the development repos to 91 % which greatly helped the dependent teams in the code scan

ICU Medical — Remote
SOFTWARE ENGINEER(INTERN) — Jan 2021 - June 2021

- Extensively worked on Drafting Pytest scripts for medical devices such as Infusion Pump.
- Worked on Code collaborator and perforce.

Skills

Programming Languages::	Python, Golang, C++
Databases:	MySQL, MongoDB, Redis
Frameworks:	Gin(Golang), Django(Python)
Tools:	Postman, Jenkins, Redpanda, Snowflake, TablePlus, MySQLWorkbench, Docker Desktop, Air
Miscellaneous:	Data Structures and Algorithms, CI/CD, AWS, JSON, API Development, Microservices, Doc
