Profile

- Accomplished Software Engineer with strong backend experience, specializing in **Golang**, with additional proficiency in **Python** and **JavaScript**.
- Skilled in designing and developing **robust APIs**, **scalable systems**, and **data-intensive applications** across cloud and edge environments.
- Hands-on experience working with diverse **communication protocols** including **HTTP**, **WebSockets**, **MQTT**, **MAVLink**, and **WebRTC** for real-time, low-latency communication between distributed systems.
- Solid foundation in **Cloud Technologies** (AWS, Docker), **CI/CD pipelines**, and **version control systems** (Git).
- Proven ability in building **high-performance data pipelines** and **event-driven workflows** using tools like **Temporal** for ERP data integration.
- Extensive experience in **Database Management** including **MongoDB**, **MySQL**, and **Redis**.
- Adept at working on **IoT** and **embedded systems**, with exposure to **edge computing devices** such as Raspberry Pi and microcontroller platforms.
- Collaborated cross-functionally on large-scale projects, translating business requirements into efficient technical implementations with a focus on observability and runtime performance.
- Passionate about backend engineering, consistently optimizing code and infrastructure for performance, scalability, and maintainability.

Work Experience

Backend Developer at Duranz April 2023 - Present

- Served as a contract-based **Site Reliability Engineer** at a London-based bank for 3 months, focusing on the **maintenance, scaling, and observability** of Go-based **Tyk API Gateway** infrastructure.
- Developed and managed robust data workflows using **Temporal** in Golang for over 8 months, integrating and processing data from **ERP systems** in production environments.
- Maintained end-to-end **client communication**, from requirement analysis to delivery, ensuring business-aligned technical solutions.
- Delivered 30+ successful freelance projects across **AI**, **IoT**, and **SaaS domains**, covering API design, system architecture, and full-stack deployments.
- Conducted structured **Golang training sessions** for students and professionals, emphasizing practical, production-grade development practices.
  - *Skills*: Golang, Python, Tyk API Gateway, Temporal.io, ERP Integration, SaaS Architecture, CI/CD, IoT Systems, API Design.

Full Stack Developer at emvirt Solutions June 2022 - April 2023

- **Emvirt Agent**: Go-based IoT software for managing Raspberry Pi and Jetson Nano, monitoring drone telemetry, and installing apps remotely via Docker.
- **emvMQTT**: Arduino Library for MCU control and sensor data display via MQTT and WebSockets.
- **EmvDash**: Next.js dashboard with Django API for fleet management, hosted on AWS EC2.
  - *Skills*: Golang, Python, React, AWS, Shell scripting.
  - *Technologies*: MQTT, Websockets, Embedded Systems.

Backend Developer at GTG Network Jan 2021 - May 2022

- Developed a Go CLI tool to fetch and store sports data in MySQL and DynamoDB, distributed via APIs.
  - *Skills*: Golang, Redis, MySQL, DynamoDB, Cron jobs.

Personal Project (latest)

Dronnayak Link to Demo

A personal project focused on building a **drone connectivity platform**, integrating **MAVLink** and cloud technologies to streamline communication and telemetry data streaming from drones. The platform supports **real-time telemetry**, enabling easier drone connectivity for autonomous drone applications and providing a scalable backend for drone data management and analysis. The project uses **Raspberry Pi** for edge computing and is designed to optimize communication protocols for IoT and real-time applications.

Education

University of Rajasthan Jaipur
Masters of Arts - Economics July 2020 - June 2022

University of Rajasthan Jaipur
Bachelor of Arts Economics July 2016 - June 2019

Kendriya Vidhyalaya Jaipur
High School Commerce April 2013 - May 2015
