Sai

Professional Summary

Automation Test Engineer with 3 years of hands-on experience in designing and executing test automation frameworks using WebdriverIO (TypeScript & JavaScript) and Selenium (Python). Skilled in Playwright for UI and API automation testing. Proficient in SQL for writing complex queries and data validation. Experienced in maintaining CI/CD pipelines using Jenkins, automating desktop applications with TestComplete, and performing performance and load testing using JMeter. Knowledgeable in cloud infrastructure and resource management through practical experience with Microsoft Azure.

Skills

Languages: TypeScript, JavaScript, Python, SQL
Frameworks & Tools: WebdriverIO, Playwright, Selenium, TestComplete, JMeter
CI/CD & Project Tools: Jenkins, Git, JIRA
Databases: SQL Server

Projects Completed

Automation Framework Development using WebdriverIO

Developed a comprehensive automation framework for a web-based enterprise application using WebdriverIO with TypeScript on the Jasmine framework. Designed modular test suites ensuring high accuracy in identifying application defects. Implemented custom reporting with Allure and HTML dashboards for efficient results tracking. Integrated test execution with Jenkins to support nightly automation runs on virtual machines.

Desktop Application Automation

Automated critical workflows of a desktop-based application using TestComplete to improve regression test coverage and reduce manual effort. Built reusable test components for data-driven and keyword-driven testing. Enhanced script reliability by adding dynamic object recognition and synchronization logic.

Database Load & Performance Testing

Performed load testing on multiple database environments using JMeter to measure query execution time and optimize performance. Designed SQL queries for stress testing database servers. Generated detailed performance reports and recommendations for optimization.
