PROFILE SUMMARY

- A results-oriented professional with over **6.4** years of experience in multi-cloud environments, including AWS, Azure, GCP, along with expertise in Java, Golang and TypeScript.
- Excellent experience in Amazon AWS cloud platform – AWS Lambda, DynamoDB, S3, EC2, AWS Fargate, Amazon Aurora, Step Functions, Cloud Watch, AWS API Gateway, AWS Cloud Development Kit with TypeScript.
- Experience in using Golang testing, Profiling and Benchmarking tools.
- Excellent experience in Microsoft Azure cloud platform – App Service, Key Vault, Web Jobs, Storage, Functions, Logic Apps, Service Bus, API Management, Application Insights and Virtual Machines.
- Experience with Microservices architecture.
- Experience in DevOps, Docker, Git and CI/CD pipeline.
- Experience in conducting team trainings on latest technologies like AWS, Azure, Golang etc.
- Interest in Evaluating and Building PoC for new integration scenarios useful for business process/cost optimization.
- Received Bluepoints and multiple Living Proof awards as an appreciation from clients for delivering the projects on time with quality.

TECHNICAL SKILLS

Cloud: Amazon AWS, Microsoft Azure, Google Cloud Platform

Technologies: Golang, Java, Typescript, Python, Angular, JavaScript, Bootstrap, ReactJS, HTML5, CSS

Operating Systems: Windows, Linux, macOS

Monitoring Tools: Datadog, Rollbar

Source Control: Git, TFS, VSTS

Development Tools: Visual Studio, VS Code

Databases: PostgreSQL, RDS, Amazon Aurora, DynamoDB, MySQL, MongoDB, Cosmos DB, Redis Cache

EMPLOYMENT DETAILS

IBM, Pune (May 2021 – Present) as a Software Developer Band 07B.

Fiserv India Pvt. Ltd. As Sr Associate, Software Development Engineering **(November 2018 – May 2021)**

KEY PROJECTS

Project 1 – Guardium Key Lifecycle Manager

Client: IBM Software Labs

IBM Guardium Key Lifecycle Manager delivers streamlined encryption key management and enhances security by providing centralized key management for IBM and non-IBM storage solutions, including cloud storage solutions and applications, ensuring seamless integration.

Responsibilities

- Designed and developed KMIP (Key Management Interoperability Protocol) Server as per OASIS standards to simplify key management, improve interoperability and enhance security.
- Implemented a POC for implementing Quantum Safe KMIP Server to leverage quantum-resistant cryptography and secure key management for applications like cloud computing, database encryption, and storage arrays.
- Enhanced security by using Kyber and Dilithium PQC algorithms in new KMIP Server.

Project 2 - Turbonomic

Client: Turbonomic – An IBM Company

IBM Turbonomic is a software platform designed to help organizations optimize the performance and cost of their IT infrastructure across public, private, and hybrid cloud environments by automating real-time optimization actions. Turbonomic ensures efficient allocation of compute, storage, and network resources without human intervention. It proactively prevents over-provisioning and maximizes ROI by delivering only the necessary resources, ultimately lowering cloud costs and improving operational efficiency.

Responsibilities

- Designed and developed foundational elements of Turbonomic's public cloud optimization offering in a full-stack engineering capacity.
- Translated business goals to technical requirements, developed novel functionality, drove adoption and trust in automation by improving user experience, and presented new capabilities to a diverse set of technical and non-technical stakeholders.
- Built Reserved Instance (RI) utilization tracking and purchase recommendation workflows, price adjustment tooling, cloud optimization and migration scenario simulation/planning and reporting, workload scaling recommendation constraints, and much more.
- I hosted and facilitated all Scrum ceremonies including daily Stand Up, Product Backlog Refinement, Sprint Planning, and Sprint Retrospectives, and evangelized incremental delivery, communication, and collaboration.
- Conceptualized, designed and delivered automated wasted AWS Redshift removal.

Project 3 - Klarity

Client: Nordcloud – An IBM Company

Klarity is a multi-cloud solution designed to enhance transparency and visibility of cloud usage and associated costs across AWS, Azure, and GCP. I worked on two key modules of the project:
1) Savings Suggestions: A custom recommendations tool for identifying orphaned, overprovisioned, and idle resources.
2) Reservations and Commitments Management: A module that provides insights into purchasing reserved instances and savings plans.

Responsibilities

- Designed and built a custom solution to recommend actions for right-sizing cloud resources and to display reserved instances and savings plans purchased by customers.
- Developed Infrastructure as Code using AWS Cloud Development Kit (CDK) with TypeScript and built RESTful web APIs via Amazon API Gateway.
- Utilized AWS Cost Explorer and Azure Advisor to provide recommendations for optimizing resource costs and identifying savings opportunities.
- Implemented custom rules using Cloud Custodian to manage cloud resource inventory and monitor overprovisioned resources.
- Loaded customer cost usage report data into Redshift and performed ETL operations to enhance coverage and utilization analytics.
- Analyzed and monitored system performance using Datadog and tracked errors with Rollbar, contributing to continuous improvement initiatives.

Project 4 - Southern Bank Portal

Client: Southern Bank

The Southern Bank Portal is a modern intranet that includes a Change Management unit designed for tracking and approving change requests through a category-specific approval process. It also features a Customer Service Request unit that allows users to submit requests such as address changes, contact information updates, and commercial services.

Responsibilities

- Collaborated closely with the Southern Bank team to understand and gather requirements for the project.
- Utilized **Azure App Service** to host provider-hosted applications and customer APIs, ensuring high availability and scalability.
- Implemented **Azure Functions** to manage DocuSign webhooks, facilitating seamless integration for document processing.
- Leveraged **Azure Service Bus** to create reliable messaging solutions, enabling effective communication between different application components.
- Employed **Application Insights** for performance monitoring and troubleshooting, leading to optimized application efficiency and user experience.

- Developed the global navigation and footer using **SPFX Extensions**, enhancing the user interface and ensuring consistent branding across the portal.
- Created various web parts to improve functionality and user engagement within the intranet.
- Built and secured APIs with **Azure API Management**, ensuring secure access and streamlined API consumption.
- Integrated **Azure DevOps** as the source control and bug-fixing tool, facilitating continuous integration and deployment practices.

Project 5 - The Vault

Client: First Foundation Bank US

The Vault is a Document Management used to store essential documents such as policies, procedures, and training materials, incorporating automated review and approval processes along with robust permission management. It also consists of an Employee Service Request Portal to streamline various HR processes, including employee onboarding, terminations, transfers, device updates, application updates, and network credential management. FFB received the Celent Model Bank 2020 Employee Enablement Award in Q2 2020, highlighting the significant benefits of "The Vault."

Responsibilities:

- Developed Provider Hosted applications for the Employee Service Request Portal and Vendor Management Portal, leveraging **ASP.NET** and **Angular** to create responsive and user-friendly interfaces.
- Conducted unit testing and troubleshooting to maintain optimal application performance, promptly resolving production issues and applying hotfixes as necessary.
- Incorporated **Azure DevOps (TFS)** for version control and bug tracking, enhancing collaboration and project management within the development team.
- Followed Agile Scrum methodology, participating in sprint planning and retrospectives while preparing design, unit testing, and code review documentation to ensure code quality and adherence to best practices.
- Integrated **DocuSign** for electronic signature processes and utilized **SharePoint 2016** for document management and collaboration, streamlining workflow and improving efficiency.

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- AZ-204 Microsoft Certified: Azure Developer Associate
- IBM Certified Advocate - Cloud v1
- Microsoft Certified Trainer (MCT)
- AZ-900 Microsoft Certified: Azure Fundamentals
- PL-900 Microsoft Certified: Power Platform Fundamentals

ACADEMIC DETAILS

- 80.53% in bachelor's in engineering (B.E) from D.Y. Patil College of Engineering, Akurdi, Pune
- 79.08% in HSC (12th) from D.S.M. College of Arts, Commerce and Science, Parbhani
- 93.09% in SSC (10th) from Bal vidya Mandir High school, Parbhani

PERSONAL DETAILS

Gender	Female
Date of Birth	11th August 1996
Languages	English, Hindi, Marathi
Nationality	Indian
