Sneha Chavan

Software Test Engineer | Manual & Automation QA | Playwright | API | JavaScript

Professional Summary

Results-driven **Software Test Engineer** with **5 years of experience** in **manual and automation testing** of web applications. Hands-on expertise in **Playwright**, **JavaScript**, and **API automation**, with a strong understanding of Agile methodologies.
Known for excellent communication, analytical thinking, and attention to detail. Skilled in collaborating across teams to ensure high-quality releases, efficient defect resolution, and process improvement.

Core Skills

- Automation: Playwright, Cypress, Selenium, JavaScript, API Testing (Postman)
- Manual QA: Functional, UAT, Regression, Exploratory Testing
- Web & Data Testing: Workflow validation, Data accuracy, End-to-End Testing
- Tools: Jira, Linear, TestRail, Confluence, Git
- Testing Practices: Test case design, execution, defect reporting, root-cause analysis
- Other: Agile methodologies, CI/CD awareness, Regression suite maintenance

Project 1: Workflow Automation Platform

Role: QA Engineer (Automation + Manual)
Environment: Playwright, JavaScript, Web Apps, API s

Project Overview:-

An enterprise-grade workflow automation system built to streamline internal approvals, task routing, and process tracking across departments. The platform handled complex business rules and integrations with third-party services.

Key Responsibilities

Automation:

- Designed and implemented **automated regression test suites** using **Playwright with JavaScript** for key workflows and dashboard validations.
- Developed **modular scripts** using Page Object Model (POM) for better reusability and maintenance.
- Integrated Playwright tests into **CI/CD pipelines (GitHub Actions)** for nightly regression runs and reporting.
- Automated **API-level validations** for authentication, workflow triggers, and data updates.

Manual QA:

- Performed detailed functional and regression testing on core modules (user management, workflow creation, approvals).
- Conducted cross-browser and device compatibility testing to ensure responsive UI.
- Validated business rule enforcement, notification triggers, and edge-case handling.

Collaboration & Reporting:

- Logged, tracked, and verified issues via Jira, maintaining clear communication with developers and product managers.
- Participated in Agile ceremonies (daily stand-ups, retrospectives, sprint demos).
- Provided QA sign-offs for staging and production releases after thorough validation.

Project 2: Client Dashboard & Analytics Portal

Role: QA Analyst (Web & API Testing)
Environment: Playwright, JavaScript, Postman, SaaS Analytic

Project Overview:

Developed for enterprise clients to visualize real-time metrics, manage reports, and monitor performance through an analytic dashboard. The system integrated REST API s for live data streaming and interactive visualization components.

Key Responsibilities:

API Testing:

- Validated REST API endpoints using Postman, checking data accuracy, response time, and schema compliance.
- Ensured data synchronization between back end API s and front-end dashboards.

Automation Testing:

- Built Playwright automation scripts for key dashboard modules (filters, charts, reports).
- Implemented dynamic waits and reusable locators to ensure script stability.
- Automated export and download validations for different file formats (PDF, Excel).

Manual Testing:

- Conducted UI/UX validation for responsive behavior and data consistency.
- Performed regression testing after every release to ensure feature stability.
- Verified user roles, data permissions, and analytic reports for different user profiles.

Reporting:

- Documented test results in Test Rail and prepared detailed release QA summaries.
- Worked with developers to reproduce intermittent defects using logs and HAR captures.

Project 3: Web Application QA for HR & CRM Systems

Role: QA Engineer (Manual + API Testing)
Environment: Web, API s, Agile

Project Overview:

Tested HR management and CRM applications that handled employee data, performance reviews, and customer interactions. Focused on workflow reliability, API stability, and user data integrity.

Key Responsibilities:

- Created and executed manual and regression test cases for HR and CRM modules.
- Validated CRUD operations via API and front-end to ensure data accuracy.
- Conducted usability testing to improve user experience for on-boarding flows.
- Ensured secure role-based access and verified audit logs for compliance.
- Provided weekly QA updates and supported release testing in staging and production environments.

Education & Work Experience

- **Master of Engineering -**Sant Gadge Baba Amaravati university, Amaravati, Maharashtra
- **Certification -** Playwright Automation with JavaScript - Udemy
