# Vasu Dev Senior Backend Engineer

Email: devvasufree@gmail.com
Mobile: +91-843-3088-318

LinkedIn: Vasu Dev
Github: DeVasu
Stopstalk: DeVasu

## Education

- **Harcourt Butler Technical University** — Kanpur, UP, India
  *Bachelor of Technology - Computer Science and Engineering; GPA: 8.0* — *July 2017 - June 2021*
  ***Courses:*** *Operating Systems, Data Structures, Analysis Of Algorithms, Artificial Intelligence, Machine Learning, Networking, Databases*

- **Modern Era Public School** — Bijnor, UP, India
  *Intermediate - PCM + Computer Science; Percentage: 96.4%* — *April 2016 - March 2017*
  ***Highlights:*** *Scored 98 in Computer Science with C++ and 95+ in PCM*

## Skills Summary

- **Languages**: C++, Python3, Golang
- **Frameworks**: ReactJS, Django, Mux/Gin(Go), gRPC, Bootstrap
- **Tools**: Git, Algorithms, Kafka, Redis, GitHub Actions, MySQL, SQLite
- **Platforms**: Linux, Web, Windows, MacOS, Docker, WSL, VSCode
- **Soft Skills**: Leadership, Event Management, Writing, Public Speaking, Time Management

## Experience

- **Playanywhere Inc.** — Remote
  *Senior Software Engineer* — *November 2024 - July 2025*
  - Architected and maintained high-throughput **real-time data pipelines** using **Golang, Kafka, and Redis**, processing live sports data to power analytics, statistics, and gamification features
  - **Engineered proprietary in-house stats aggregator system** to generate complex statistics and trivia metrics unavailable through standard data sources, enabling unique content delivery for sports platforms
  - Developed **scalable REST APIs** using Golang's Gin, Mux, and GORM frameworks with **WebSocket integration** for admin backend, supporting real-time data operations and administrative functions
  - **Tech Stack :** Golang, Redis, MySQL, Kubernetes, Python, MongoDB

- **Applore** — Full-Time
  *Software Engineer I* — *December 2022 - November 2024*
  - Architected modular, **reusable data ingestion frameworks in Golang** to systematically collect and standardize static sports data across **50+ leagues**, creating unified data models for cross-sport analytics and reporting
  - Delivered enterprise-grade **live data processors** managing 200K events/hour during peak Olympic coverage(2024 Paris Olympics), maintaining **sub-100ms latency** while ensuring zero data loss across 30+ simultaneous sports feeds
  - Designed and implemented scalable ingestion pipelines for **static and dynamic datasets**, integrating Kafka and SQL databases to deliver real-time, analytics-ready data at scale
  - **Tech Stack:** Golang, Redis, MySQL, Kafka, Asynq, Kubernetes

- **Optum** — Full-Time
  *Software Engineer I* — *July 2021 - December 2022*
  - Designed **event-driven Golang APIs** with Kafka-based messaging to **support 10K+ concurrent real-time transactions per second, ensuring sub-200ms** end-to-end latency
  - Developed and containerized Go and Python microservices to **automate legacy processes**, eliminating major chunk of manual tasks and **boosting system reliability by 45%**
  - Re-engineered three core Canonical APIs by removing redundant layers and streamlining request flows, cutting infrastructure costs by **$30K+/year and improving average response times by 60%**
  - **Tech Stack:** Golang, Python, Elastic Search, Kafka, IBM CDC

## Projects

- **Stressor - (React + Golang)** : Designed a competitive programming stress tester supporting 5 languages. Can detect discrepancies between outputs of two codes over multiple generated test cases. (Work in progress)
- **TweetMe (React + Redux + Golang + MySql )**: A Twitter clone that supports all basic functionalities like Following, Retweeting, Like etc.
- **QuizMaster (React + Redux )**: A Simple Quiz Hosting website that can be used for hosting Quizzes and supports all CRUD functionalities on Quizzes.
