Programming Skills

- **Programming Languages and framworks**: Python, Golang, Typescript/JavaScript, FastAPI, Flask, Express, GoFiber, Lexical
- **Databases**: SQL (PostgreSQL, MySQL), NoSQL (Redis, MongoDB), VectorDB(ChromaDB, PgVector)
- **DevOps**:Docker, AWS, Git, GitHub Actions

Experience

- **GrowthX.club** Remote
  SDE - Full time *May 2024 - Present*
  - Engineered a job board using **Express (Typescript)**, designing the **Mongodb** schema to manage complex relationships between **4000+** members and **200+** companies.
  - Designed and implemented **RESTful APIs** for a job tracking module, featuring efficient **server-side pagination** and filtering to power a Chrome extension and dashboard, complete with Clevertap and new relic setup for funnel visibility.
  - Built a **real-time collaborative text editor** with a fully functioning version history used by over 2500 members. This system uses the Lexical library by Meta as a base, engineering a state synchronization mechanism to ensure data consistency across concurrent user sessions.
  - Integrated Razorpay Orders and Subscription APIs to launch a secure paywall, automatically issuing user-level access keys and restricting premium product features to paid subscribers.
  - Architected a centralized LLM gateway microservice in Python, implementing provider failover for high availability, token-bucket rate limiting, and granular usage tracking to power all in-house AI features.
- **Onlinesales.ai** Pune
  SDE - Full time *Febuary 2021 - January 2024*
  - Collaborated on designing and implementation of the inventory and SKU system, expanding its reach from large agencies to individual store owners through a new product launch. Prioritized enhancing SKU management functionalities, enabling broader user access, and enhancing campaign and account management features.
  - Designed and implemented a data pipeline to analyze user wallet balances and proactively identify users at risk of balance depletion or with low balances, resulting in a **57% increase in product retention**.
  - Leveraged CleverTap to automate personalized email notifications to targeted user segments, reducing the number of days a user has zero wallet balance by 50% and fostering user engagement.
  - Developed and implemented a Google Business Messages (GBM)-enabled chatbot for **Xiaomi**, facilitating seamless communication between **700 stores nationwide** and their users. Allowing users to receive and respond to messages, access self-service like view real-time stock availability, pricing, ongoing offers.
  - Responsible for reducing system issue by **31%** through targeted bug fixes and upgrading in critical areas

Projects

- **Shawty** — https://github.com/Araon/shawty
  - A robust and self-hosted URL shortener powered by **Node.js**, **MySQL**, and **Redis**, boasts lightning-fast link redirection. Offering support for link expiration, It also integrates analytics for each short link
- **Hydra** — https://github.com/Araon/Hydra
  - High-volume task scheduler in **Python** and **Go** with a Scheduler, Coordinator, and Worker components. communicating via gRPC and HTTP, backed by a **PostgreSQL** database for efficient task management.
  - Highly resilient and efficient worker management to make sure maximum up-time
- **Meido** — https://github.com/Araon/Meido
  - Developed a Telegram bot, Meido, enabling users to search and download anime seamlessly to their Telegram account. Used Telegram's own data storage to be used as databases and distribute large files.

Education

- **Hooghly Engineering and Technology College** Kolkata, India
  Bachelor's Degree in Computer Science and Engineering (B.Tech); CGPA: 8.8/10 *Jul 2017 - Aug 2021*
