EDUCATION

Vishwakarma Institute of Technology, Pune, Maharashtra **08/2018 – 06/2022**

B.tech, Computer Engineering (CGPA 8.75)

EXPERIENCE

Logic Monitor, Pune, Maharashtra **03/2023 – Present**

Associate Software Engineer

- Optimized log lifecycle and event handling in Go using the Fiber framework, improving processing throughput by ~35% and reducing latency by ~20%, while handling **500K+** daily log events.
- Reduced log ingestion error rates from ~7% to under 5% by implementing custom **Prometheus** metrics cutting mean time to detect (**MTTD**) by **40%** and mean time to resolve (**MTTR**) by **30%**, greatly boosting troubleshooting efficiency.
- Automated dashboard setup with **Go Cobra and Taskfile**, reducing configuration time from 30–40 minutes to **under 10 minutes** and cutting errors by over 70%, enabling faster, more reliable service onboarding into monitoring.
- **Reduced repetitive log influx by 40%** by implementing **log throttling** using Go's **zap** logging library cutting ~200K noisy entries to lower storage use and cost.
- **Boosted log query performance** by introducing **per-customer log partitions,** reducing search space by up to 50% per query and improving response times by ~2x on high-volume tenants. This architectural change also enabled easier **tenant-level isolation** for incident triaging and cost attribution.
- Pioneered the development of **log-based metric extraction**, enabling users to derive actionable metrics (e.g., error rates, event frequencies) by defining custom parse queries directly on logs. This new feature **powered up to 10% of log analytics revenue** and drove user adoption among enterprise clients.
- **Built a unified in-memory cache library**, with support for serving expired items during backend outages, reducing memory overhead by 20% and improving cache hit reliability under failure conditions.
- Replaced HTTP-based deletions with **Kafka** events, enabling pods to **independently consume delete actions** and maintain consistent in-memory caches—eliminating data discrepancies and boosting reliability in a horizontally scaled system.

Integral Ad Science, Pune, Maharashtra **06/2022 – 12/2022**

Associate Software Engineer

- Developed an in-house **Language Translation Service** using Python's Flask framework, **reducing translation costs by 50%** to achieve over **92% accuracy** in sentiment analysis of translated web content.
- Leveraged AWS services, including **EC2** for deploying ML models, **ECS** and **CloudFormation** for infrastructure stacks, **ELB** for load balancing, and **CloudWatch** for monitoring.
- Integrated **Metricbeat** with **Elasticsearch** in the Language Translation Service, enabling real-time visibility into service metrics such as request latency, error rates, and throughput. This integration significantly improved debugging speed and incident resolution by providing granular observability across distributed services.

Integral Ad Science, Pune, Maharashtra **09/2021 – 05/2022**

Software Engineering Intern

- **Analyzed relationships between IPs and frequently visited domains** using **Neo4j** to model network graphs and identify user clusters. Used **Python (Jupyter)** for data preprocessing and enrichment, enabling discovery of latent browsing patterns and improving audience segmentation strategies.
- **Developed Contextual Targeting Service** which categorizes websites into behavioral segments using **ML algorithms** (e.g., keyword frequency analysis, TF-IDF).

TECHNICAL SKILLS

Languages: Golang, Java, Python, C, C++, SQL
Tools/Software: Git, Linux, Docker, Kubernetes, Apache Kafka, AWS
Frameworks: Spring boot(Java), Gin(Go), Fiber(Go), Flask(Python), React.js, Node.js
Database: MySQL, PostgreSQL

CERTIFICATION

AWS Certified Cloud Practitioner
AWS Certified AI Practitioner
