TechCospace

Pintoo (7+ Years Exp.)

Full Stack Developer

PROFILE SUMMARY:

A highly skilled software developer with 7+years of experience in designing and developing scalable, user-friendly, and high-performing applications. Proficient in JavaScript and TypeScript, with hands-on expertise in building RESTful APIs and GraphQL for seamless data operations. Extensive experience with backend development using Node.js, deploying applications on cloud platforms like AWS and Azure, and ensuring high availability through Kubernetes and Helm. Adept at leveraging modern tools like Terraform for infrastructure automation and maintaining version control using Git. Skilled in integrating AI-driven solutions, blockchain technologies, and secure authentication mechanisms, with a focus on delivering innovative and compliant platforms.

EXPERIENCE

- Enhancement of the application for better usability, handling clients tickets and providing resolvers, writing APIs using Nest Js, Graphql and handling them in Apollo Client, writing frontend code in Reactjs and Nextjs, writing Test cases in Jest for the backend resolver and frontend components, handling the DB in R3 Corda(blockchain).
- Currently Working in E Commerce Industry and a Good Knowledge of B2C Market.
- Designed and developed the smart contracts using Solidity and implemented test scripts on the smart contracts using Hardhat framework.
- Integrated the Smart contract with frontend using react.
- APIs creation Using jQuery, designed and developed a complete architecture framework in private blockchain (Hyperledger fabric), integration of Hyperledger blockchain with frontend using APIs created in Nodejs, creation of Database in MongoDB and CouchDB,writing chaincodes in Golang for the business logic, training of interns for blockchain technology, participation in multiple Blockchain Hackathon on national and international level, setup the private blockchain lab for different blockchain platforms
- Worked on the development and implementation of new blockchain technologies and completed professional market research.
- Performed initial client assessment and analysis of the research process.
- Supported Chief Operating Officer with daily operational functions,
- Defined the structure of the Blockchain Development for the Product team and defined the Access controls
- Collaborated with colleagues from other departments and participated in the creation and testing of new software applications.
- Creation of smart contracts for tokens including ERC20 , ERC721 , ERC223, ERC1155 and writing scripts for deployment and test for different cases.

WORK EXPERIENCE

Fullstack Developer
Techcospace Technologies Full-time Feb 2023 - Present

Fullstack Developer
Inclusive Growth Chain Apr 2022 - Mar 2023

Nodejs Developer

TechCospace

qwertycode time June 2017 - Apr 2022

TECHNICAL SKILLS

Programming Language	JavaScript, TypeScript, Python, Go, Nodejs HTML , React, Hooks, Lead, CSS, Redux
Ethereum tools	Solidity, Truffle, Geth, Remix, Hardhat
Testing Tools	Chai, Mocha, Jest
Hyperledger Tools	Hyperledger Fabric, Explorer, Indy, Besu
Frameworks	Reactjs,Nextjs, Express
WebTools	Nestjs, Graphql, Prisma, Nextjs, REstAPI, FastAPI
Methodologies	Agile/ Waterfall
Fundamental Knowledge	OOPS,YAML,SynchronizationThreading, DSA
Theoretical Knowledge	ERCs, EIPs, Consensus Algorithm, Defi, NFTs
Tools/IDEs	Remix, VS code, Docker, Kubernetes, GIT
Database	MongoDB,LevelDB, CouchDB, SQL, Oracle
Operating Systems	Linux, Mac, Windows
Cloud	AWS
Blockchain	Ethereum, Hyperledger fabric, Multichain, Polygon, Algorand, Xinfin, IBM, R3 Corda, Stellar

Major PROJECTS:

Project 1: VRplaced
An AI-driven interview platform designed to streamline hiring processes by automating initial interview stages. It uses advanced AI algorithms to evaluate candidates based on predefined parameters, reducing recruiter workload and ensuring consistent evaluations.

Role & Responsibilities:

- Designed and developed the entire platform's architecture, including the frontend (React with TypeScript) and backend (Node.js with TypeScript).
- Implemented AI models to evaluate candidate responses, leveraging Natural Language Processing (NLP) for sentiment analysis and scoring.
- Created an intuitive and user-friendly interface for candidates to interact with the AI seamlessly.
- Developed and integrated RESTful APIs for efficient communication between system components and external services.
- Optimized platform scalability and performance using AWS services, ensuring reliable operations under high traffic.
- Managed source code with Git, maintaining a clean and collaborative version control workflow.
- Leveraged JavaScript and TypeScript expertise for both development and performance optimization.

Project 2: Title-Direct
A versatile platform providing expert guidance on real estate, mortgages, and insurance. It enables users to make informed decisions by accessing personalized advice and financial tools, backed by robust data analysis capabilities.

Role & Responsibilities:

- Designed and implemented GraphQL APIs for flexible and efficient data querying to improve the user experience.
- Optimized SQL databases for secure, high-performance data storage and retrieval operations.
- Deployed the platform on Azure, using Kubernetes for container orchestration and Helm for managing application deployment.
- Automated infrastructure provisioning with Terraform, ensuring seamless deployment and scaling.
- Leveraged AWS for platform hosting and scalability, ensuring high availability under varying traffic conditions.
- Built backend services using Node.js and TypeScript to ensure a modular, maintainable, and scalable codebase.
- Integrated RESTful APIs for communication with external services and internal components.
- Utilized Git for version control, enabling effective collaboration among team members.

Project 3: DocVenture
A comprehensive platform empowering organization to manage electronic agreements as part of the DocuSign Agreement Cloud. It provides secure, compliant eSignature solutions for businesses to streamline contract workflows and document management.

Role & Responsibilities:

- Developed and integrated eSignature functionality to support seamless document signing across devices.
- Built robust backend services using Node.js and TypeScript, ensuring secure and efficient handling of agreements.
- Integrated APIs for document management, enabling automated workflows and data synchronization.
- Ensured compliance with legal and industry standards for electronic agreements, safeguarding sensitive business data.
- Enhanced user experience through a responsive and accessible interface using JavaScript and modern UI frameworks.
- Leveraged AWS services to host and scale the platform for high reliability and performance.
- Secured sensitive data with authentication mechanisms such as OAuth2 and JWT.
- Managed code versioning and collaborative development processes using Git.

Project 4: Co-lending Platform
A decentralized blockchain-based application designed to empower Farmer Producer Organizations (FPOs) and financial institutions. It ensures secure, transparent, and efficient lending and borrowing processes by leveraging distributed ledger technology.

Role & Responsibilities:

- Designed and developed the application using Hyperledger Fabric, enabling secure, immutable transactions for lending and borrowing.
- Created backend services using Node.js and TypeScript, incorporating smart contracts in Golang for automated business logic.
- Developed a user-friendly frontend interface using React and JavaScript, ensuring intuitive access for FPOs and banks.
- Integrated RESTful APIs to support seamless data exchange between the blockchain and traditional systems.
- Utilized AWS services for hosting, scalability, and ensuring the platform's performance under diverse workloads.
- Collaborated with stakeholders to gather requirements, ensuring the platform catered to their operational needs.
- Managed development workflows using Git for version control and efficient team collaboration.

EDUCATION

Bachelor of Technology in Electrical Engineering
(2015)
