Professional Summary

Detail-oriented Full Stack Developer with strong backend specialization in **TypeScript** and **NestJS**, particularly in Web3 and blockchain-integrated systems. Experienced in building secure, scalable APIs, managing relational databases, and writing comprehensive test suites with **Jest** and **Vitest**. Skilled in integrating with EVM-based smart contracts, handling blockchain transactions, and delivering production-ready, well-documented APIs using **OpenAPI (Swagger)**. Proven track record of collaborating across frontend and blockchain teams in agile environments to build seamless, decentralized applications.

Role

As a Full Stack Developer, I contribute to end-to-end product development by designing backend services in Go/Node.js and creating responsive interfaces using React.js. I focus on delivering secure, maintainable, and scalable applications. My role involves integrating APIs, optimizing deployments with Docker/Kubernetes, and ensuring system performance and reliability.

Professional Experience

Software Developer-II
Vissol Vassutech Pvt. Ltd. (Feb 2023 – Present)

- Developed scalable REST APIs and microservices using Golang to support high-traffic product platforms.
- Led backend optimization efforts that improved API response times by 35%.
- Integrated PostgreSQL and Redis for transactional data and caching layers.
- Created deployment pipelines using Docker, Helm, and Kubernetes for Azure-based environments.
- Collaborated with DevOps teams to automate log monitoring with Prometheus and Grafana.

Full Stack Developer (MERN + Go)
TwinsSet Pvt. Ltd. (Apr 2022 – Jan 2023)

- Developed hybrid backend modules in Node.js and Golang for an internal analytics dashboard.
- Maintained and enhanced React.js frontend with routing, authentication, and role-based UI controls.
- Implemented unit and integration testing using Mocha, Chai, and Go's built-in test framework.
- Reduced deployment errors by setting up CI/CD pipelines via GitHub Actions.

MERN Stack Developer

QwertyCode Pvt. Ltd. (Jan 2021 – Apr 2022)

- Developed customer onboarding and reporting features using MERN stack in a SaaS-based CRM.
- Migrated legacy APIs to modern RESTful services and optimized MongoDB queries for better performance.
- Integrated external APIs (e.g., Stripe, SendGrid) and built automated job processing using Node.js queues.

Web Developer (MERN)
Techcospace Pvt. Ltd. (May 2019 – Jan 2021)

- Created and maintained internal tools for HR and inventory management.
- Delivered high-quality responsive UIs using React and Bootstrap with reusable components.
- Developed backend logic for audit logging and report generation using Express.js and MongoDB.

Projects

Web3 Backend APIs (2024)
Backend services for a decentralized NFT marketplace and token issuance system.

- Developed scalable REST and GraphQL APIs using **NestJS** and **TypeScript**.
- Created blockchain interactions using **ethers.js** to connect to EVM-based contracts.
- Managed transaction creation, verification, and wallet-based role logic.
- Wrote **unit**, **integration**, and **e2e tests** using **Jest**.
- Documented all routes and payloads using **Swagger**.
- Handled schema migrations and connection pooling with **TypeORM** and **PostgreSQL**.

Title-Direct (2023 – Present)
A real estate and mortgage platform for title management and advisory services.

- Built secure backend services using **NestJS**, **GraphQL**, **TypeScript**, **Prisma**, and **PostgreSQL**.
- Integrated blockchain ledger using **R3 Corda** and implemented scalable infrastructure with **Docker**, **Kubernetes**, **Helm**, and **Azure Kubernetes Service (AKS)**.
- Managed authentication with **Azure Active Directory**, created custom workflows, and implemented monitoring using **New Relic**.
- Utilized **Swagger** (OpenAPI) for API documentation and **Boomi** for enterprise integrations.
- Designed UI components in **Next.js** with **Material UI (MUI)** and managed real-time state with **Redis**.
- Conducted rigorous testing using **Jest** and **Cypress** for unit and end-to-end validation.

DocVenture (2023 – Present)
A digital document automation platform for secure contract generation and approvals.

- Developed full-stack components using **NestJS**, **GraphQL**, **PostgreSQL**, and **Prisma**.
- Built AI-powered automation features with **OpenAI**, **LLMs**, and integrated backend logic in **TypeScript**.
- Designed frontend in **Next.js** and **MUI** with real-time interaction via **Apollo Client**.
- Utilized various **Azure services** for deployment, storage, and identity management.
- Managed API documentation with **Swagger**, and enabled continuous deployment via **GitHub Actions**.

- Ensured reliability through observability tools like **Prometheus** and **Grafana**.

Supply Chain Management System (2022)
A blockchain-based vaccine shipment tracker system that monitored real-time temperature and geolocation during transit.

- Developed blockchain infrastructure using **Hyperledger Fabric**, **Shell scripts**, and **Docker** for network orchestration.
- Implemented smart contracts (chaincode) in **Golang** and stored on-chain data in **CouchDB**.
- Built **Node.js** REST APIs to facilitate blockchain interaction and **MongoDB** for off-chain storage.
- Created real-time UI with **React.js**, **Redux**, **TailwindCSS**, and **TypeScript**.
- Integrated backend/frontend using **Axios**, and implemented unit testing via **Jest**.

DeFi Lending Platform (2022)
A blockchain-powered decentralized finance platform enabling tokenized lending and collateralized borrowing.

- Architected secure blockchain interactions via **Hyperledger Fabric** and implemented business logic in **Golang** smart contracts.
- Set up decentralized network orchestration using **Shell scripting**, **Docker containers**, and **CouchDB** for on-chain persistence.
- Developed backend services with **Node.js**, RESTful APIs, and leveraged **MongoDB** for fast off-chain record management.
- Built responsive, single-page UI components using **React.js**, **Redux**, **TailwindCSS**, and **TypeScript**, connecting via **Axios** to blockchain APIs.
- Ensured consistent application quality through automated testing in **Jest** and Git-managed CI workflows.

Token Creation Platform (2021)
A platform for launching custom ERC20 and ERC721 tokens with smart contract tooling.

- Developed token factory contracts in **Solidity** with dynamic metadata generation.
- Integrated **Node.js** backend for deployment scripts using **Truffle**.
- Created dashboard with **React.js** and connected via **Web3.js** and **MetaMask**.

Billing Microservices (2021)
A microservices billing system designed for real-time invoicing and audit logs.

- Created services in **Golang** using **gRPC**, **JWT**, and **Redis**.
- Integrated observability stack using **Prometheus**, **Grafana**, and **ELK stack**.
- Automated deployments via **Docker Compose** and **Kubernetes** orchestration.

Education & Certifications

- B.Tech in Electrical Engineering – Krishna Institute of Engineering and Technology
- Go Programming Language (Udemy)
- Full Stack Web Development with Node.js and React (Udemy)
- Docker & Kubernetes: The Complete Guide (Udemy)

Tools & Technologies

Languages: Go, JavaScript, TypeScript, Python
Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap
Backend: Golang, Node.js, Express.js, REST APIs, GraphQL, gRPC
DevOps & Deployment: Docker, Kubernetes, GitHub Actions, Jenkins, Nginx
Databases: MongoDB, PostgreSQL, MySQL, Redis
Cloud: AWS, Azure
Others: Git, GitHub, Postman, Swagger, Prometheus, Grafana

Soft Skills

System Design | Clean Code Practices | Collaboration | Agile Workflows
