Rachit Chaudhary

+91 7797140070 | rachit.bluebolt@gmail.com | linkedin.com/in/rachit-chaudhary-0841 | Bengaluru, Karnataka, India

PROFESSIONAL SUMMARY

Software Developer with close to 4 years of experience building scalable backend applications using Go, Python, and Java. Skilled in designing distributed systems and automating complex workflows using frameworks like Spring Boot, Django, and gRPC. Passionate about performance optimization, clean architecture, and building resilient, production-grade systems.

PROFESSIONAL EXPERIENCE

Dell Technologies | Software Engineer 1 | 08/2022 – Present | Bengaluru, Karnataka, India

- Designed and implemented Jenkins pipelines and Python scripts to automate non-functional performance testing of Temporal workflows on PCF, reducing manual effort and testing time by 70%.
- Led the swift migration of artifactory assets on the JFrog platform, ensuring zero downtime and earning formal recognition for execution excellence.
- Refactored and optimized a shared library to improve system performance by 20% and developer productivity by 35%, enhancing code infrastructure used across multiple microservices.
- Partnered with international teams to design and integrate a new feature while refactoring subpar quality code, resulting in 30% faster development cycles.
- Built a Kafka messaging library with extensibility for RabbitMQ, improving message handling and increasing team productivity by 30%.
- Spearheaded code refactoring and test suite expansion, increasing development efficiency by 80% and raising test coverage above 90%, earning team-wide recognition.
- Developed gRPC APIs to streamline inter-service communication, improving system throughput and efficiency by 15%.
- Implemented thread-safe local caching with Mutex locks, reducing latency and improving data retrieval speed by 30%.
- Created a Redfish call relay service and Temporal-based Mock Server to unblock dependent teams during development, reducing delays by 50%.
- Engineered Go-based microservices for a Bare-Metal Platform Service, contributing to successful project delivery.
- Built a Java microservice using Spring Boot and JUnit, increasing operational efficiency of the APEX Offer Engineering team by 10%.

OnSiteGo | Software Developer | 10/2021 – 08/2022 | Bengaluru, Karnataka, India

- Contributed to the development of an in-house CRM application.
- Led the implementation of a full-stack KYC feature using Django and React, ensuring regulatory compliance and enhancing data accuracy.
- Integrated and trained a third-party AI OCR tool (Nanonets) to reduce data redundancy by 30% and address frauds by 20%.
- Optimized SQL queries via Django ORM refactoring, doubling API response speed and improving backend performance.

MountBlue Technologies | Software Development Engineer | 07/2021 – 10/2021 | Bengaluru, Karnataka, India

- Developed a responsive e-commerce website using ReactJS, Redux, and the Fake Store API, demonstrating proficiency in modern front-end development and state management in a web-application.
- Developed a data analysis project, utilizing data visualization and statistical analysis skills.
- Completed intensive backend training in JavaScript, Node.js, and Express.js, and applied concepts in developing APIs and middleware.
- Acquired Git proficiency, utilized version control for collaborative software development.

SKILLS

Go – Gin, Fiber, Temporal.io, Go Routines, Concurrency, Channels, Python – Django, Numpy, OpenCV, Scikit, Pandas, Celery, JavaScript – Node.JS, React, Redux, Express.JS, Java – Spring, Junit, C/C++, MongoDB, MySQL, PostgreSQL, Redis, Docker, Kafka, Avro Schemas, Kubernetes, Microservices, RESTful APIs, Cloud Foundry, Jenkins, System Design, Algorithms, Data Structures, SOLID Principles, Git

EDUCATION

Christ University | M.Sc. – Physics (Astrophysics and Astronomy) | 06/2019 – 05/2021 | Bengaluru, Karnataka, India

Sikkim Manipal Institute of Technology | B.Tech. – Mechanical Engineering | 07/2013 – 08/2017 | Rangpo, Sikkim, India

PROJECTS / LEARNINGS

- Replicated core features of a four-decade old software called IRAF (Image Reduction and Analysis Facility) using Python, which was originally designed to run only on Linux. Gained experience in basic image processing technique through this project.
- Completed Google FooBar Challenge after receiving an invitation while working on IRAF project.

INTERESTS

Data Science and Analysis, Machine Learning, Business Intelligence, Optimization, Quantum Computing, Mathematical Programming
