Backend Engineer | Distributed Systems | High-Scale Infra | Golang, Python

Backend engineer with 5+ years of experience designing distributed systems, real-time platforms, and fault-tolerant microservices at scale. Scaled systems to 30K+ RPS and 34M+ concurrent users (IPL 2024), led billing infra across Razorpay/PhonePe/Google Play. Seeking to apply deep infra expertise to high-impact engineering teams.

EXPERIENCE

Senior Software Engineer – Bobble AI
Oct 2024 – Present | *India* - Designed and deployed fault-tolerant, scalable subscription microservices across Google Play, iOS, PhonePe, and Razorpay, enabling platform-agnostic billing for 5M+ users. - Built real-time state synchronization using Go, Redis, and PostgreSQL with idempotent event handling and retry queues, improving reliability across all billing flows. - Implemented sandbox testing using Google Play Billing Lab and Apple Sandbox, enabling isolated QA and stable production releases. - Engineered internal redemption flow for PhonePe with auto-debit logic, resilient retries, and expiry checks, driving a 100% YoY revenue increase. - Delivered measurable growth: PhonePe (₹28–₹36L/yr), Razorpay (₹14–₹18L/yr), Google Play (30–50% YoY growth).

SDE-2 – JioCinema, Viacom18
May 2023 – Oct 2024 | *Bangalore, IN* - Owned and scaled playback systems to 34M+ concurrent users and 30K+ RPS during IPL and Bigg Boss live streams, ensuring zero downtime. - Led P0 service migrations with real-time traffic rerouting, health-based cutovers, and rollback strategies, improving service reliability during peak loads. - Debugged and fixed Redis-based session validation bottlenecks, improving request latency and reducing playback errors under load. - Built and integrated BigQuery-based observability for request tracing and log analytics across high-traffic endpoints. - Enhanced VOD support for KaiOS and JioBharat, optimizing streaming performance across low-spec devices.

Software Engineer – Zepto
May 2020 – May 2023 | *Bangalore, IN* - Designed and implemented a dynamic surge-based payout system adjusting rider incentives in real time using weather, region, and demand signals. - Reduced payout cycle from monthly to weekly by automating eligibility computation, batch execution, and dispute handling using Golang, Redis, and SQL. - Built incentive modules with auditability and rollback support, increasing payout transparency and operational efficiency. - Delivered scalable backend infra to support 10K+ active riders with fair, real-time incentives and reduced manual override load.

EDUCATION

Guru Gobind Singh Indraprastha University
B.Tech in Computer Science
Aug 2015 – July 2019 | GPA: 7.4/10.0

TECHNICAL SKILLS

Languages: Go, Python, Java, SQL, C++, JavaScript
Frameworks/Tools: FastAPI, Flask, Django, Gofiber, Docker, Kubernetes, Git
Cloud & Infra: AWS (EC2, Lambda, EKS, SQS, S3), GCP (Pub/Sub, Cloud Functions, BigQuery), Redis, PostgreSQL, Elasticsearch
Concepts: Distributed Systems, Microservices, Event-Driven Architecture, Observability, Fault Tolerance, Load Balancing, High Availability

---

PROJECTS

Zarity – Chronic Disease Management Platform
- Developed backend modules for health records, video appointment scheduling, and care coordination using REST APIs. - Deployed containerized services on AWS EKS and EC2 with fault-tolerant configurations. - Integrated AWS SQS for asynchronous task execution and Redis caching for fast access. - Ensured secure data storage and retrieval with PostgreSQL and scalable service design.
