Summary:

- A Java developer with more than 8 years of experience in participating in all aspects of the software development lifecycle, including estimating, technical design, implementation documentation, testing, deployment, and support of applications developed for various clients. I am a motivated and experienced Java Developer with a proven track record of success in developing highly scalable applications with improved performance and robustness.

Experience Details:

- Working as Senior Lead Engineer - Development in FIS Solutions (India) PVT LTD from August 2024 to till date.
- Worked as an Associate in Cognizant Technology Solutions PVT LTD from April 2018 to August 2024
- Worked as a Java Developer in Sprouts Techno Solutions PVT Ltd. January 2016 – April 2018

Education Details:

- 2015 – BE in Computer Science with 60%
- 2011 – Diploma in IT with 72.67%
- 2007 – SSC with 65.84%

Technical Skills

Elements	Particulars
Primary Skills	Core Java, Java 8
Operating Systems	Windows, Linux
J2EE Frameworks	Spring Boot, Spring Security, Spring Batch, Spring Cloud, Data JPA, Spring Rest Webservices, Microservices
Web Technologies	HTML, CSS, JavaScript, Bootstrap, Angular
Cloud	Microsoft Azure, AWS (Amazon web services EC2, S3 bucket, RDS)
Databases	PostgreSQL, Oracle, MySQL
CI/CD	GitHub Actions, OpenShift, Jenkins
Build Tool	MAVEN

Code Repository	GitHub, GitLab, SVN

Project #1:

Project Name: Aligne (Trading and Risk Management)
Role: Java/J2EE Developer Description:
Aligne optimizes trading, risk management and operations of physical energy commodities and their associated financial instruments. It supports gas and power commodities, weather, emissions, coal,fuels, refined products, liquified natural gas (LNG), FX and derivatives worldwide.

Energy Trading, Risk and Logistics Platform enables you to calculate mark-to-market positions in real-time across organizations, capture physical and financial instruments for multi ple commodities, and aggregate and analyse historical and interval market data from multiple sources. Includes the ability to nominate gas on pipelines and manage storage inventory, as well as power scheduling and spot bidding processes, making it the ideal solution for traders and utilities.

Responsibilities:

- Developer for firsthand client communication and developing product enhancements.
- Currently working on the point products which deal with Trading and Risk Management and short-term trading service to the customer.
- Developing and designing is the key element in this role following Agile methodology.
- Involved in estimations part of complex requirements.
- Working on JIRA and confluence.
- Performed root cause analysis and created corrective action strategies to mitigate risks.
- Working as a Full Stack Developer.

Project #2:

Project Name: ISEM-MASTER
Client: Sanofi
Role: Java/J2EE Developer
Description:
The ISEMMASTER application allows managing environmental and water monitoring control for different sites (Spain, China, India).

The process describes:

- Collection of samples from production buildings.
- Analysis of samples by the Environmental Monitoring QC Laboratories.

Responsibilities:

- Responsible and mentored the team in complete software development lifecycle (SDLC) tasks - design, coding, testing, and documentation using Rational Unified Process (RUP) for analysis and design of application.
- Join meeting with Microsoft Developer France Team and Application owner for modernizing application.

- Designed and developed the web-tier using Html, Bootstrap, React.
- Involved in the development of business module applications using J2EE technologies like Spring Webservices and Spring Data JPA.
- Used the light weight container of the Spring Frame work to provide architectural flexibility for inversion of control (IOC).
- Hibernate frame work is used in persistence layer for mapping an object-oriented domain model to a relational database (PostgreSQL).
- Implemented various design patterns in the project such as Business Delegate, Data Transfer Object, Data Access Object, Service Locator and Singleton.
- Used SQL statements to fetch the data from the database.
- Deployed the application on to Microsoft Azure using GitHub Actions.
- Used GitHub as Code repository.

Project #3:

Project Name: Sanofi Pasteur OMCL Tool
Client: Sanofi
Role: Java/J2EE Developer
Description:
Sanofi Pasteur and Afssaps organize quarterly regular follow-up meetings with the aim of:
· Exchange logistics information
· Exchange quality monitoring information
The information exchanged during these points is multiple and is the subject of documents prepared manually by Sanofi Pasteur and Afssaps. Apart from these regular points, information exchanges are done by e-mail or postal, telephone.

Responsibilities:
- Responsible and mentored the team in complete software development lifecycle (SDLC) tasks - Software design, coding, testing, and Documentation.
- Developed and implemented a robust web application utilizing Angular, Spring microservices, Spring Data JPA, Spring Batch, and Amazon S3 Bucket, resulting in a 40% improvement in application performance and user experience.
- We implemented various design patterns in the project such as Data Transfer Object, Data Access Object, and Singleton.
- SAML Authentication is used for authentication using Spring Boot Security.
- Used SQL statements to fetch the data from the PostgreSQL database.
- Deployed the application on AWS Cloud using GitLab CI/CD Pipeline, Argo CD, and OpenShift.
- Eclipse is used as an IDE tool for application development and debugging.

Project #4:

Project Name: MASTER BI
Client: Sanofi
Role: Java Developer Description:

The MASTER BI application deals with the results reporting related to the sterility control samples done in the vaccine manufacturing environment, from the VRACS production to the PFV fulfilment, included the research and development services & MTECH. The interface that uploads the data from MASTER to MASTER BI on a daily basis has been updated too to implement this new Cleaning information in the reports.

Responsibilities:

- Work on NTLM V2 Single sign-on using jcifs.
- Understanding of Business Requirements and specifications.
- Handling Service Now Enhancements and providing solutions with in SLA (Service Level Agreement).
- Work on reported vulnerabilities and co-ordinate with different teams to address the vulnerabilities to make the application secure.
- Coding for JSP to create the GUI.
- Understanding of Business Requirements and specifications.
- Eclipse used as IDE tool for application development and debugging.
- Developed test cases and performed unit test using JUnit Framework.

Project #5:

Project Name: MASTER
Client: Sanofi
Role: Java Developer Description:
The MASTER application allows managing environmental and water monitoring control.
The process describes:

- Collection of samples from production buildings.
- Analysis of samples by the Environmental Monitoring QC Laboratories.

Responsibilities

- Involved in Project Design Documentation, design Reviews and Code Reviews.
- Developed the Web application using core Java concepts like collections (Data Structure), multithreading, and oops concepts for developing application modules.
- Developed static and dynamic Web Pages using JSP, HTML, JavaScript and CSS.
- Developing and coding J2EE Components with JSP, Java Beans and business objects with Hibernate.
- Configured connection pooling using JBOSS application server.
- Developed and Deployed the Application on using MAVEN build.
- Coding using Java, Hibernate, HTML, and JSP.
- Developed SQL Server stored procedures to execute the back-end processes.
- JBOSS was used as both the Application server in the development and production environment.

Declaration

I hereby declare that the particulars given above are true to the best of my knowledge & belief.
