SUMMARY

Senior Software Engineer with 8.6 years of progressive experience architecting and delivering enterprise-grade web applications across diverse technology stacks. Demonstrated expertise in backend systems engineering, with 5 years of specialized focus on **Golang** development, cloud infrastructure design using **Amazon Web Services**, **RESTful API** development, and distributed microservices architecture. Complemented by 3.5 years of frontend development proficiency encompassing modern JavaScript frameworks (**React**), advanced web technologies (**HTML5, CSS3, ES6+**), and **GraphQL** integration.

WORK EXPERIENCE

Development Engineer 3, Comcast **Aug 2022 - Present**

Product: Linear Rights Metadata Management

*Tech stack**: Golang, AWS, CI/CD, Docker, Kubernetes, Teamcity, Rundeck, etc***

- **Infrastructure Migration:** Spearheaded the migration of multiple production services from **self-hosted** Kubernetes environment to **EKS**, ensuring seamless transition with minimal downtime and enhanced scalability.
- **Docker image optimization**: Reduced the file size of the docker images by 70-85 percent in few microservices by running the build process in a golang based alpine container.
- **CI/CD Process time reduction**: Improved the process time of CICD pipelines by creating a customised docker image, thus made the deployment time faster.
- **System Monitoring & Reliability**: Created cronjobs to backup the MongoDB in preview and production environments.
- **Technical Architecture & Documentation**: Designed and Developed the project TSC - Traffic Schedule Conversion which converts the Broadcast Exchange Format (SMPTE standard) to Playlist Exchange Format and other formats using AWS API Gateway, S3, Event bridge, etc
- **Design Patterns**: Applied Design patterns to develop customer specific playlist file generation, thus reduced code duplication and improved maintainability.
- **Concurrency**: Made use of **Goroutines** and **channels** in the adapter services, to concurrently process the customer broadcast information thus decreased the overall processing time by 75%.
- **Performance Profiling**: Made use of the native profiling tools like **pprof** to monitor the memory leaks, resource allocation and performance of multiple services.
- **Full-Stack Development**: Developed APIs services for Channel Delivery Portal using **Golang** and **PostgreSQL**, delivering robust and scalable solutions for content management workflows.
- **Schedule Overrides**: Implemented Schedule override functionalities by making use of goroutines to override the media shows in bulk for the customer NBC.
- **Security Vulnerability**: Fixed the major security vulnerability in the LRM UI application by removing the exposed authentication token.

- **Security & Compliance:** Actively participated in Secure Development Lifecycle (**SDLC**) initiatives, providing technical recommendations and implementing security best practices across development processes.
- **Cybersecurity Score Improvement**: Increased organisational cybersecurity rating from 650 to 800+ through systematic resolution of security issues identified by **Snyk**, **WhiteSource**, and **GitHub code scanning** tools.
- **Deployment & Operations**: Managed production deployments using containerization technologies (**Docker**) and orchestration tools (**TeamCity, Rundeck**), ensuring reliable and repeatable deployment processes.
- **Code Quality Assurance**: Conducted thorough peer code reviews and established quality gates to ensure well-tested, maintainable code is delivered to production environments.

Development Engineer 2, Comcast **Oct 2020 - Aug 2022**

Product: Linear Rights Metadata Management
*Tech stack - **Golang, VueJs, CI/CD, AWS, Docker, Kubernetes, etc***

- **High-Performance API Development**: Developed and implemented highly scalable RESTful APIs for **NBC's Super Bowl** broadcast operations, ensuring optimal performance under peak traffic loads and real-time content delivery requirements.
- **Frontend Feature Implementation**: Developed schedule override functionality using **Vue.js** within the **Affiliate Manager** application for NBC, enhancing operational flexibility and content management capabilities.
- **Enterprise Authentication Solutions**: Designed and implemented **Single Sign-On (SSO)** authentication systems for Linear Rights Metadata Management (LRM) UI and Affiliate Manager applications, strengthening security protocols and improving user experience across enterprise platforms.
- **Client Integration Development**: Built and deployed custom adapter solutions for major broadcast clients including **FOX, AT&T, Spacecity, etc** ensuring seamless data integration and workflow automation across diverse client environments.
- **Production Operations Management**: Led production deployment processes, coordinating release schedules and ensuring zero-downtime deployments while maintaining system stability and service continuity.
- **Quality Assurance & Testing**: Developed comprehensive **unit test suites** using the **testify** package, achieving and maintaining minimum 70% code coverage standards to ensure robust application reliability and reduce production defects.

Development Engineer 2, Comcast **Apr 2020 - Sep 2020**

Product: Console, Cloud Video Platform
*Tech stack - (**React, Graphql, Typescript, HTML, CSS, Javascript**)*

- Created new list and detail view pages in the application.
- Created duration component in all the pages of the console application.
- Written unit test cases using jest.
- Responsible for doing production deployments.
- Participated in labweeks and trainings.

Associate Consultant, Infosys **Jun 2019 - Mar 2020**

Client: Health Care Service Corporation
*Tech stack - (**Angular, Typescript, HTML, CSS, Javascript**)*

- Developed resuable Angular components for the client Healthcare Service Corporation.
- Involved in PR reviews and written unit test cases.

Associate System Engineer, IBM **Jan 2017 - May 2019**

Client: MetLife Insurance
*Tech stack - (**React, HTML, CSS, Javascript**)*

- Developed resusable react components for the project Small Market Digital (SMD) and Global Sales and Servicing Platform for the client Metlife insurance.
- Involved in reviewing peers' PRs and mentored Junior developers.

EDUCATION

B.Tech - Information Technology **Aug 2012 - Apr 2016**
College of Engineering Guindy (CEG), Anna University **7.74 GPA**

HSC **June 2010 - Apr 2012**
Karnataka Sangha Higher Secondary School **92.25%**

SSLC (Chennai District First) **June 2010 - Apr 2012**
Karnataka Sangha Higher Secondary School **98.4%%**

ADDITIONAL INFORMATION

- **Technical Skills:** Golang, React, HTML, CSS, Javascript, Graphql
- **Databases Used:** MongoDB, DynamoDB and RDS
- **AWS Services Used:** Lambda, Cloudformation, S3, API Gateway, Cloudwatch, EKS, SNS, SES, Route53, Transfer family, Event Bridge, Secret manager, IAM, DynamoDB, Elasticache, Resource manager, Cost Explorer
- **Monitoring Tools Used**: Splunk, Datadog.
- **CI/CD**: Concourse.
- **Deployment Tools:** Docker, Kubernetes, Teamcity, Rundeck, Servicenow
- **Scrum/Documentation tools:** Jira Confluence
- **Languages:** English, Tamil
- **Awards/Activities:**
  High Five Award, Comcast
  Champ award, Comcast
